Submissions & Contributions

Railtalk Magazine, a magazine written by the Enthusiast for the Enthusiast. So why not join the team. We are always looking for talented photographers and writers to join us at Railtalk. Be it though pictorial submissions or via a written article featuring an event or railtour, we greatly appreciate any contributions to the magazine however big or small.

Photographic Contributions

All Photographic contributions should to be sent to us via email, post or via the members section page on our website. Contact addresses are provided above.

All images should be provided at a resolution of at least 2400px x 1700px at 240dpi.

Welcome to Issue 180

The the autumnal feeling is now amongst us and that is always signalled up here in York with the dispatch of the RHTT equipment to various parts of the country. Yes it really is that time of the year again!

In the news this month... Transport for Wales (TfW), the not-for-profit organisation established by the Welsh government, has signed a deal with Colas Rail UK to buy Pullman Rail Limited. TfW was established to propel the Welsh government's integrated transport network vision, through conducting a national review of its depots and stabling options for out of service trains. This includes Wales' largest depot at Cardiff Canton which services, cleans and maintains the vast majority of TfW's trains. Pullman Rail Ltd, the main providers of specialist engineering services for rail vehicles in the UK, also operates from the Canton depot. Therefore, the acquisition will enable both TfW and Pullman to build on an already existing working partnership and to further invest in delivering improved results for TfW and Pullman's customers and clients.

TfW CEO, James Price said: "High performing and enterprising, Pullman reflects many of TfW's own values. Pullman has been operating in the UK for more than 25 years, delivering high quality products and services. This technical expertise, quality workmanship and innovation are integral to the UK rail industry, ensuring legacy fleet can be maintained. TfW are proud to be aligned with this strong heritage and of the opportunities this partnership will present for the growth of both organisations in the future, in improving rail services for our passengers and securing jobs locally in Wales."

Strengthened by the partnership and purchase of Pullman, Canton depot will possess the required capacity and resilience to support the launch of TfW's flagship Metro scheme, as well as new rolling stock for the Wales and Borders network. Pullman will continue to operate as the stand-alone business, Pullman Rail Ltd. The company's activity with existing services delivered under the Pullman brand will therefore, remain business as usual.

Also this month, what an earth is a 'Bio-reactor toilet'? As Eversholt Rail announces £10 million contract that has been awarded to London & South Eastern Railway Limited (LSER), with aims to modify and develop its fleet of 112 Class 375 electric trains. The programme commenced in August 2021 with design work. The first unit upgrade will take place in December 2021 at one of LSER's Depots, with the programme anticipated to be completed in Q4 2024. The scope of work will deliver the franchise committed obligations and it will improve the fleet with several system upgrades. Works include replacing the existing lighting with LED lights, as well as introducing new at-seat USB charging and energy meters. A trial bio-reactor toilet system is also being fitted to one vehicle to upgrade the existing toilet. These trials of the new bio-reactor toilet will take place over the course of two years.

Paul Sutherland, Client Services Director at Eversholt Rail said: "This contract continues to build on our strong relationship with LSER. The Southeastern fleet is a key fleet for Eversholt Rail and this package of upgrades continues Eversholt Rail's commitment to investing in and improving the travelling experience for customers in the Southeast".

"We are very pleased to be working with our Eversholt Rail and LSER colleagues to upgrade the British-built Class 375 Electrostar fleet and ensure that the trains continue to offer reliable and comfortable service to passengers," further added, Peter Broadley, Alstom's Managing Director of Services.

Once again, thanks for all the photos sent in this month, we really appreciate the time taken to send them to us. Until next month, stay safe.

Andy

Avanti West Coast invests £45 million to upgrade Wi-Fi coverage across West Coast Main Line

Avanti West Coast is investing £45m in a deal with BT to upgrade mobile and Wi-Fi infrastructure to improve connectivity for customers travelling on the West Coast Main Line. The partnership will see BT add network capacity to nearly 200 cell masts via its mobile arm EE, boosting 4G network coverage on the West Coast route by June 2023 that will enable faster, more reliable onboard train Wi-Fi.

Investment by both organisations is designed to enhance and expand Wi-Fi coverage for customers travelling onboard Avanti West Coast trains through technology upgrades and addressing Wi-Fi blackspots where signal is weak or non-existent.

The programme, which is underway, will improve connectivity and digital experience while on the move. Customers connected to the onboard Wi-Fi will be able to browse the internet, send and receive emails and make video calls more seamlessly. While BT will provide the infrastructure and connectivity to enable the onboard Wi-Fi, upgrades to the Wi-Fi system will be made by Avanti West Coast, as part of its investment. This will enable a reliable connection for customers accessing the internet for free on their device. Technology enhancements and additional masts will also provide better connectivity for EE customers who are local to the West Coast Main Line, as well as emergency service respondents in the area - with faster data transfer speeds available and more mobile devices able to use the network simultaneously.

This will enhance coverage in areas with existing 4G, as well as introduce new 4G coverage. Areas that will benefit include Cheshire, Greater Manchester, Merseyside, and Staffordshire as well as regions of Lancashire, Cumbria, and Edinburgh.

Rail Minister, Chris Heaton-Harris, said: “Avanti West Coast’s upgrade work, supported by the Department for Transport, is a win for everyone who uses, or lives close to the West Coast Main Line. Investing in better connectivity helps transform rail travel, improving journeys for passengers by building a black-spot free network, with the added benefit of supporting local communities.”

Phil Whittingham, Managing Director at Avanti West Coast, said: “This is a really exciting partnership with BT. The benefits of working with the UK’s leading telecommunications and network provider on this project will enhance reliability of our onboard Wi-Fi and give our customers faster speeds and extended coverage on our route. It’s a significant step towards better digital connectivity on the West Coast Main Line, which has never been more important. These improvements will enable our customers to stay connected during their journey and be more productive onboard our trains, while boosting mobile coverage for communities local to our route.”

Sarah Walker, BT Corporate and Public Sector Director and Enterprise Sponsor for UK Rail Strategy, said: “The West Coast Main Line is one of the UK’s busiest transport routes and, as more people begin returning to offices and others travel for leisure purposes, they will enjoy an enhanced mobile service, delivering quality and reliable connectivity whilst onboard. Whether needing to join a call for work, listen to music or simply browse the internet, our network has been designed to ensure seamless connectivity for passengers. Not only will the investment in 4G infrastructure benefit rail users, but it will also improve connectivity in towns and villages where masts have been installed or upgraded.”

Avanti West Coast

Class 390 040 passes Slindon on July 20th working the 1S78 London Euston - Glasgow Central service. *Phil Martin*

Avanti West Coast launches new 'Feel Good Travel' campaign

Avanti West Coast's has unveiled its new fun campaign titled "Feel Good Travel" aimed at encouraging people back to rail.

Spearheaded by Turbo, a rollerblading turtle, Feel Good Travel launched in the same week as the West Coast Main Line operator reintroduced extra services on its Manchester, West Midlands and North Wales routes.

By encouraging people back to rail, the campaign will also help support the communities Avanti West Coast serves, including local businesses, and promote a more environmentally friendly travel choice.

The new campaign includes a 60 second television advert featuring Turbo whizzing around on his rollerblades and also appears on video-on-demand, out-of-home sites as well as radio, in print and digital media, and with supporting social activations.

The majority of filming for the advert took place in an around Manchester with a selection of rural shots in the village of Castleton. The final scene shows one of Avanti West Coast's iconic Pendolinos crossing Twemlow Viaduct in Cheshire.

Kate Squires, Marketing Director, Avanti West Coast said: "We really want to inject a feel good vibe when people think about travelling with us. That's the purpose of this campaign. We're incredibly excited to bring people back on-board and shout about all of the great reasons why it's the best way to get around. This is the perfect way to do it.".

Avanti West Coast

With all ten engines working, Class 221 111 and 221 103 speed past Moore, south of Warrington, on August 4th with the 08:52 Edinburgh to London Euston service. *Barry Longson*

Class 390 020 working an Avanti Pendolino service to London Euston passes Farington Curve Junction on August 15th. *John Sloane*

On July 1st, Class 66 171 passes Shipley Gate working 6M82 12:43 Walsall freight terminal to Dowlow Briggs sidings. *Mark Pichowicz*

Afternoon sun greets Class 66 110 at Cardiff on August 18th, working the 09:24 Dee Marsh to Margam. *Barry Longson*

DB Cargo UK plans to lease Mossend EuroTerminal to Maritime Intermodal

DB Cargo UK has announced plans to lease its Mossend EuroTerminal rail freight facility to Maritime Intermodal with effect from October 1st, 2021. The announcement comes just two years after Maritime Intermodal took over the lease of DB's intermodal rail freight facilities in Wakefield, West Yorkshire and Trafford Park in Manchester. The Lanarkshire depot provides intermodal freight transfer between rail and road and is well-placed at the centre of Scotland's road network, next to the M8 motorway linking Glasgow and Edinburgh.

DB Cargo UK's Chief Executive Andrea Rossi said: "Our decision builds on the success of our existing relationship with Maritime Intermodal which has quickly established itself as a major player in the UK intermodal market."

"We look forward to maintaining our close alliance with Maritime as the industry focuses on modal shift, while delivering sustainable solutions and innovation to our customers," he added.

Since DB announced its collaboration back in 2019, the number of services operated by DB on behalf of Maritime Intermodal has now doubled, from four to eight.

Last year, the collaboration between DB and Maritime won the Rail Freight and Logistics Excellence Award at the 2021 Rail Business Awards.

John Williams, Executive Chairman, of Maritime said: "We are excited about this latest opportunity to continue to build on our fantastic relationship with DB Cargo UK as we continue to provide our customers with sustainable, complete and cost-effective transport and storage solutions across the UK. Demand for rail freight is rapidly increasing and we recognise the importance of investing in our terminals, plant, systems and more personnel to support our ambitions in rail as we hope to expand our network of terminals to support both ours and our customers' growth."

DB Cargo

Class 90 020 and 90 037 make light work of the 07:07 Mossend to Daventry modal service seen at Moore on August 4th. *Barry Longson*

During the blockade at Manchester Victoria the loaded eastbound Biomass and waste trains have been kept on the Calder Valley route. However at weekends both services have been diverted via Diggle and on a rainy August 7th, Class 66 034 was captured passing Stalybridge working the 11:47 Knowsley to Wilton waste train. *Lee Stanford*

Class 66 174 passes Dawlish Warren on 6C53 china clay from Parkandillack to Exeter Riverside N.Y. *Alan Sinclair*

DB Cargo UK wins industry 'Customer Care' award

DB Cargo UK has won the Customer Care Award at the Rail Freight Group's annual industry awards for its work with Associated British Ports (ABP) to establish a new service into Southampton's Western Docks for customer MINI. Despite problems caused by the Covid-19 pandemic and disruption to international supply chains during the Brexit transition period, in 2020 DB Cargo UK and ABP overcame a number of significant challenges to deliver a truly innovative rail freight solution to one of their biggest customers, MINI.

In January 2021, a train loaded with MINIs successfully ran into Southampton's Western Docks, which was the culmination of months of planning and preparation by teams working on behalf of all the parties involved. This was the first time a train carrying automotives had run into the Western Docks in around seven years. The new service, which has already grown to five services a week, has delivered both economic and environmental benefits for the customer, as well as unlocking new capacity and additional opportunities for ABP's Western Docks.

The challenge:
In January 2020, DB Cargo UK and ABP were informed that, due to a change in customer demand and changes to international shipping services, MINI planned to increase volumes into Southampton's Eastern Docks from its Oxford production plant. In order to overcome this, DB Cargo UK And ABP set about looking for a different solution to MINI's logistical challenge.

The solution:
DB Cargo UK already operated 5-6 round trip services per week for MINI into Southampton's Eastern Docks. However, the customer wanted the train to operate from the Western Docks due the proximity of the ships in the Port. It was decided to look at the feasibility of re-establishing an automotive rail head at the port's Western Docks. In any event this would be more economically viable for MINI, as it reduced the need for them to incur the significant additional cost of transporting their vehicles by road from the Eastern Docks to the Western Docks where their ships were waiting. The ABP ANSA sidings in the Western Docks were identified as a prime location, despite the fact that they were only used at that time for stabling locomotives, had inadequate lighting and no suitable power supply to meet the demands of the special automotive WIA wagons.

At this point, COVID-19 restrictions were introduced as the UK went into lockdown, which introduced a whole new level of complexity to the project, as strict on-site social-distancing measures were introduced and meetings moved online. ABP's team scoped and then set about making the necessary upgrades to the former ABP ANSA sidings which included the installation of temporary power generators, improved lighting and the creation of a new raised platform to enable the safe loading and unloading of vehicles from the WIA wagons. DB Cargo UK's Service Design and Planning Team began working with Network Rail to identify new paths into the Western Docks which was, at the time, particularly congested with intermodal traffic. At the same time, both ABP and DB Cargo UK continued to keep MINI updated as work progressed.

Despite the need for strict Covid-19 measures to be put in place and social-distancing maintained at all times, the work was completed seamlessly with strong on-site management of activities achieved at all times. All issues were successfully overcome and on September 29th, the first trial service consisting of just one WIA wagon ran into the Western Docks and all cars were offloaded without issue. Temporary generators were used at this point to power the wagons, however following the success of the trial, ABP quickly set about installing a permanent, more sustainable power supply. On January 19th, the first full service ran from Oxford to Southampton's Western Docks consisting of eight, fully-loaded WIA wagons carrying MINIs. The train arrived on time, all vehicles were successfully off-loaded and the empty train also departed on time – all in a turnaround time of just four hours!

The outcome:
This was a significant project providing major economic and environmental benefits to the customer, MINI, in the most challenging of circumstances, coming as it did in the middle of the COVID-19 pandemic.By working together, ABP and DB Cargo UK, successfully persuaded the customer not to switch from rail to road by delivering a cost-effective solution with minimum disruption to MINI's supply chain. Establishing the new automotive rail head in the Western Docks not only saved MINI the expense of having to haul its vehicles by road from the Eastern Docks to the Western Docks, it has also saved them in the region of 200 tonnes of carbon emissions per annum. The solution ensured DB Cargo UK strengthened its relationship with MINI.

ABP's investment of £300,000 has breathed new life into the under-utilised ANSA sidings site, creating the potential for further growth opportunities in the area. Further to this, the investment has lessened the likelihood of potential damage from additional handling operations, moving from one end of the port to the other. By moving the service from the Eastern to Western Docks, the MINIs are kept in pristine condition for customers.

The number of services operated by MINI into the Western Docks has already risen to five services a week.

DB Cargo

Diverted due to the closure at Manchester Victoria, Class 66 154 passes Northenden Junction on August 3rd with the 05:40 Wilton to Knowsley empty waste service. *Barry Longson*

On August 12th, Class 66 059 passes through Stafford with a car train from Halewood - Southampton. *Michael Lynam*

Class 66 059 passes Millmeece hauling a Railvac as 06:02 Bloxwich - Crewe on July 20th.

Freightliner

Class 66 571 departs East Midlands Gateway working 4L10, the 18:35 service to Felixstowe. *Mark Pichowicz*

Class 66 502 on the 6C58 Banbury Road to Whatley empties passes Hungerford on September 3rd. *Michael Bennett*

Class 66 539 and 66 953 pass Leyland on August 4th top'n'tail with a Brewery Junction to Crewe engineers train during the renewal works in Manchester. *John Sloane*

Freightliner

Why move a couple of locos when you can move six at once? On August 28th, Freightliner did just that on the 14:03 Hope Earles sidings to Crewe Basford Hall, with Class 66 605, 66 538, 66 618, 66 587, 66 619 and 66 606 seen passing Wilmslow. *Barry Longson*

Class 66 560 passes through Stafford on August 12th with a loaded stone train from Tunstead - Northampton. *Michael Lynam*

On August 26th, Class 66 547 passes Chesterfield with an infrastructure train from Doncaster - Toton. *Michael Lynam*

Freightliner

Class 66 542 and 59 002 on the Acton to Merehead empties pass Pewsey on August 25th.
Michael Bennett

Freightliner

On a glorious August Bank Holiday Saturday, Class 66 606 passes Guide Bridge station working the 08:19 Pendleton to Guide Bridge Yard. *Lee Stanford*

On August 26th, Class 66 557 passes Chesterfield with a train of sleepers from Doncaster Wood Yard - Fairwater Yard. *Michael Lynam*

Class 59 004 is seen at Margaretting Parsonage Lane crossing with 6V10 Chelmsford to Acton stone empties on August 3rd. *Steve Chapman*

Freightliner

Class 66 542 passes Hungerford with a very short 7C77 Acton to Merehead on September 3rd. *Michael Bennett*

Freightliner

Class 66 510 and 66 548 working a Crewe - Southampton liner pass Chorlton on August 25th. *Mark Enderby*

Class 66 615 on 6H50 Willesden - Tunstead stone empties passes Plumley on August 13th. *Mark Enderby*

Class 70 007 on 6F35 Northenden - Runcorn bins passes Plumley on August 13th. *Mark Enderby*

Freightliner

On September 2nd, Class 66 546 passes Haxey working the 4L85 Tinsley - Felixstowe. *Steve Thompson*

On August 7th, Class 90 006 leads the 04:57 Trafford Park to Felixstowe liner through Hampton in Arden. *John Alsop*

On August 12th, Class 66 555 passes Micheldever with the Southampton Maritime to Trafford Park liner. *David Lindsell*

GBRf

On August 20th, Class 66 732 slowly passes passengers on platform 1 at Stockport while in charge of the 09:01 Peak Forest to Small Heath. *Barry Longson*

Class 69 001 and 66 796 on the 0O69 Longport to Eastleigh passes Micheldever on August 11th. *Michael Bennett*

Class 66 701 heads the 4M18 05:10 Felixstowe - Trafford Park Euro Terminal intermodal past Millmeece on July 20th. *Phil Martin*

Class 66 704 passes Millmeece on July 20th working the 6M90 05:06 Avonmouth - Clitheroe cement tanks. *Phil Martin*

GB Railfreight rebrands locomotive to raise awareness of prostate cancer, in partnership with the League Managers Association and Prostate Cancer UK

GB Railfreight (GBRf) has unveiled a newly named Class 66 locomotive in honour of its partnership with Prostate Cancer UK, GBRf's chosen charity, and the League Managers Association (LMA), GBRf's corporate partner.

Revealed at Victoria Station in London, the locomotive has been named "League Managers Association" and painted in a unique livery featuring Prostate Cancer UK's iconic logo – the Man of Men – to raise awareness of the most common cancer in men. After the naming ceremony, guests boarded a specially chartered service hauled by the newly named locomotive for a trip around the Kent countryside.

In addition to the unveiling, this September GBRf has operated a 4-day rail tour in support of Prostate Cancer UK. 'GBRf 2021' will be the third 4-day rail tour organised by the company, having raised over a quarter of a million pounds from its previous two marathon charity charter trains.

GB Railfreight announced its partnership with Prostate Cancer UK back in January 2020. As GBRf's chosen charity partner, all fundraising activities conducted by the company is in support of Prostate Cancer UK's mission to stop the disease limiting lives.

GBRf has also been working with its corporate partner, the LMA, since 2020. As part of its partnership with GBRf, the LMA offers access to football managers, elite-level leadership and high-performance experts and the most recognisable personalities in sport.

Prostate Cancer UK is also the official charity of the LMA. The important partnership increases awareness of prostate cancer through football and activities conducted by the LMA's membership from across The Football Association, Premier League, and Football Leagues.

John Smith, CEO, GB Railfreight: "Our specially painted Class 66 locomotive will be raising vital awareness around the issue of prostate cancer by showcasing the iconic Man of Men logo as it travels across the country on the railway. This has only been made possible by the strong collaboration GBRf has with its two brilliant partners, Prostate Cancer UK and the League Managers Association."

Angela Culhane, CEO, Prostate Cancer UK:"We are delighted the iconic Prostate Cancer UK "Man of Men" logo will be displayed proudly on the Class 66 locomotive together with the League Managers Association name plate. This is an excellent initiative, which not only raises funds for vital research into better tests and treatments, it will also spark conversations about prostate cancer – a disease affecting one in eight men in the UK, and one in four black men. We are very pleased to be working with two of our fantastic partners on this life saving journey and thank them for their ongoing support."

LMA, Chief Executive, Richard Bevan said: "The LMA is privileged to be involved with the unveiling of this newly named Class 66 locomotive in collaboration with our Corporate Partner GB Railfreight and longstanding Charity Partner Prostate Cancer UK. We are excited to be able to raise awareness of our fantastic partnerships with both of these organisations and to continue to develop the partnerships into the upcoming season."

LMA Chairman Howard Wilkinson said: "On behalf of the LMA and all the association's members, I would like to thank GB Railfreight for unveiling this locomotive in honour of its partnership with both the LMA and Prostate Cancer UK. We are extremely proud to be partners with these two fantastic organisations."

GBRf

Class 66770 passes the small car park at Davenport station on August 13th, working the diverted 15:36 Hope Street to Peak Forest. (66 719 was on the rear).

On August 24th, Class 150 249 forms the 2T75 11:45 Falmouth Docks to Truro service. *Derek Elston*

Great Western Railway

On July 28th, Class 150 219 and 150 207 approach Dawlish Warren with a Paignton - Exmouth service. *Richard Hargreaves*

On July 26th, Class 158 767 calls at Dawlish Warren whilst working a service to Paignton. *Richard Hargreaves*

Class 166 205 approaches Dawlish Warren on July 31st with a service to Paignton. *Richard Hargreaves*

Great Western Railway

Trains and boats and…..ah well, two out of three ain't bad, as the song goes. On July 28th, Class 166 205 passes Shell Cove on 2T08 Exmouth - Paignton as one of the cruise liners looks on. *Steve Thompson*

Great Western Railway

On July 27th, one of those Class 800s, they're not the most inspiring of machines, but I had to get this one, 'Captain Tom' as Class 800 025 arrives at Dawlish on 1A81 Paignton - London Paddington. What a shame it's not a proper nameplate!. *Steve Thompson*

Seen Arriving at Dawlish is 2F16 Paignton - Exmouth, worked by Class 150 246 and 150 232 with a 'Cambridge Tour' bus on the road to its right. Hmmm. *Steve Thompson*

Power car No. 43022 trails 43088 on 2C28 Exeter - Penzance at it departs Dawlish on July 30th. *Steve Thompson*

Great Western Railway

On August 4th power car No. 43022 leads a Penzance - Cardiff Central service towards Dawlish Warren. *Richard Hargreaves*

Power cars Nos. 43093 and 43188 are seen working a Penzance - Cardiff Central service along the sea wall at Dawlish Warren on August 4th. *Richard Hargreaves*

Class 802 109 departs Truro with 1C69 06:37 London Paddington to Penzance service on August 24th. *Derek Elston*

Great Western Railway

On July 31st, power cars Nos. 43186 and 43097 head through Dawlish working 2P30 Exeter - Plymouth. *Steve Thompson*

The Class 165/166 Turbo units are now a familiar sight at Cardiff and in a lucky bit of sun Class 165 132 arrives on August 18th before forming the 11:00 departure to Taunton. *Lee Stanford*

On August 4th, a lovely sunny morning greeted power cars Nos. 43098 and 43170 arriving at Dawlish on 2U10 Penzance - Bristol.
Steve Thompson

Great Western Railway

On July 27th, Class 166 203 departs Dawlish Warren with a service to Paignton.
Richard Hargreaves

On July 26th, power cars Nos. 43016 and 43042, are seen departing from Dawlish on 2E07 Penzance - Exeter. *Steve Thompson*

Class 800 321 departs Totnes with a service to London Paddington on August 4th.
Allison Twycross

Great Western Railway

A rare Class 57 bodysnatcher in daylight working a sleeper ECS balancing move; the night before's 1A50 was over 2 hours late and a Class 802 unit!! Class 57 605 is seen working 5C50 14:37 Penzance T.&R.S.M.D. to London Paddington passing Dawlish in torrential rain. *Alan Sinclair*

On July 31st, Class 802 101 heads through Dawlish working a London Paddington - Penzance service. *Richard Hargreaves*

On August 3rd, Class 150 265 and 150 266 head away from Dawlish working a Paignton - Exmouth service. *Richard Hargreaves*

Great Western Railway

It's a while since I've been to this location and, like just about everywhere else, the vegetation has been allowed to run riot. But it's still not a bad vantage point, why, I even took a photo of a Class 800! This is 800 304 passing Bishopsteignton, on the Teign Estuary, working 1A87 Paignton - London Paddington. *Steve Thompson*

An illustration of how the new section of sea wall at Dawlish has affected the view of passing trains. Here we have power cars Nos. 43130 and 43098 emerging from Kennaway Tunnel and along Kings Walk with 2E03 Penzance - Exeter. *Steve Thompson*

Class 802 107 on the 1A81 Penzance to London Paddington service passes through Hungerford on September 3rd. *Michael Bennett*

Great Western Railway

On July 29th , a sunny morning in Dawlish, what could be better? As Class 166 203 passes above Coryton Cove on 2T08 Exmouth - Paignton. *Steve Thompson*

A bit of variation in Dawlish is provided by Class 158s, mostly 3-car sets working side-by-side with the 'Castles'. Some found their way onto the Torbay locals though, and here is Class 158 950 departing on 2T27 Exmouth - Paignton service. *Steve Thompson*

On July 30th, Class 150 233 and 150 232 pass Bishopsteignton working 2F22 Paignton - Exeter. *Steve Thompson*

Great Western Railway

Class 802 017 and 802 018 are seen near Pewsey with the 1A84 Penzance - London Paddington service on August 25th. *Michael Bennett*

Class 165 113 working the 2T17 Newbury to Bedwyn is seen nearing Hungerford on September 3rd. *Michael Bennett*

Class 800 317 working the 1C81 London Paddington to Exeter service passes Hungerford on September 3rd. *Michael Bennett*

Hull Trains

Class 802 301 passes Marholm on August 2nd while working the 11:48 London King's Cross to Hull service.
Steve Chapman

Network Rail

Class 37 219 and 37 610 pass Charnock Richard on August 17th with a Derby to Carlisle test train. *John Sloane*

NMT power cars Nos. 43290 and 43299 speed past Farington Curve Junction with a Derby to Slateford test train on August 17th. *John Sloane*

Class 37 610 and 37 116 pass Leyland at speed with a Derby - Stockport - Mossend test train on August 4th. *John Sloane*

Class 37 116 is seen on the rear of 1Z71 10:12 Derby RTC to Derby RTC via York Yard North near Ambergate (with Class 37 219 leading). *Mark Pichowicz*

Network Rail

On July 30th, making its regular visit to the South West, power cars Nos. 43290 and 43299 with the NMT pass Bishopsteignton, on the Teign Estuary, with the Penzance - Dawlish Warren leg of the diagram. *Steve Thompson*

Network Rail

On August 17th, Class 37 116 and 37 610 working the 1Q83 from test train from Blackpool North - Derby RTC via a very meandering route, passes Hoghton Crossing. *Michael Lynam*

On August 31st, the 1Q15 Derby - Swansea [Landore] via Walsall, Hereford, Gloucester, Swindon [reverse], Gloucester and Cardiff heads through Kemble with power cars Nos. 43290 and 43299. *Ken Mumford*

On August 4th, Class 37 610 and 37 116 top'n'tail a Derby - Stockport - Mossend test train, seen at Stockport waiting for departure north.
Steve Stepney

Network Rail

On July 30th, power cars Nos. 43290 and 43299 are seen heading out of the platform at Dawlish Warren with the NMT. *Richard Hargreaves*

Class 37 219 stands at Carlisle on August 27th with the 3Q76 test train having arrived from Mossend just before dawn. *Kevin McCormick*

Class 37 219 and 37 254 top'n'tail a Network Rail test train through Warrington Central on August 5th. *Jeff Nicholls*

TransPennine Express

With the hall in the background, Class 68 031 is seen at Kirkham Abbey on July 15th with the 12:34 Scarborough to York service. *Steve Chapman*

TransPennine Express

The two week closure of Manchester Victoria for the TransPennine route upgrade has brought about the use of a TransPennine IET unit on the Liverpool Lime Street to Manchester Airport corridor, Class 802 204 approaches Mauldeth Road with the 15:00 from Liverpool Lime Street in a rare bit of sun on August 9th. *Lee Stanford*

Class 68 019 passes the signal for Kirkham Abbey on July 15th while working the 11:00 from York to Scarborough. *Steve Chapman*

Class 68 020 passes Kirkham Abbey signal box with the 10:34 Scarborough to York service on July 15th. *Steve Chapman*

TransPennine Express

Class 68 026 stands at the head of a cancelled 12:34 Scarborough to York TPE service on August 26th. It ran ECS to York instead due to crew issues. *Kevin McCormick*

Class 68 023 is about to enter the holding siding (by platform 1) at Manchester Piccadilly with the 13:10 Liverpool Lime Street to Longsight ECS on August 26th. *Barry Longson*

On August 26th, Class 397 011 stands at Lancaster working 1M89 06:26 Oxenholme Lake District to Liverpool Lime Street service. *Kevin McCormick*

TransPennine Express

In a rare bit of sunshine on a generally wet August 6th, Class 68 032 'Destroyer' was caught propelling the 13:00 Gascoigne Wood to Longsight, (comprising of Mark 5 set TP08), out of platform 1 at Stockport. The service was booked to reverse at Alderley Edge but the manoeuvre was strangely made at Stockport giving the working a 95 minute early arrival at Longsight. *Lee Stanford*

Class 185 137 and 185 125 depart Manchester Piccadilly on August 10th, with the 15:58 service to Redcar Central. *Barry Longson*

Class 185 122 and 185 105 round the curve at Kirkham Abbey on July 15th with the 11:34 Scarborough to York service. *Steve Chapman*

TransPennine Express

Class 68 020 is seen at Kirkham Abbey with the 15:34 Scarborough to York service on July 15th. *Steve Chapman*

Class 68 031 is pictured on the curve just north of Kirkham Abbey on July 15th with the 14:00 York to Scarborough service. *Steve Chapman*

Class 185 105 and 185 122 pass over the level crossing at Kirkham Abbey on July 15th while working the 13:00 York to Scarborough. *Steve Chapman*

TransPennine Express

Arriving into Manchester Piccadilly due to engineering around Miles Platting, bi-mode Class 802 218 slows for its final stop with the 12:43 from Newcastle on August 13th. *Barry Longson*

TransPennine Express

A timetable change in late August by TransPennine Express saw a Class 68 diagram introduced on the 15:27 Manchester Piccadilly to Scarborough. Here Class 68 032 is seen at Stalybridge working the service on August 23rd. *Barry Longson*

On a sunny August 25th, Class 68 022 arrives in Manchester Piccadilly with the 5E41 empty coaching stock from Longsight depot which will then form the 15:27 departure to Scarborough. *Lee Stanford*

Class 68 020 arrives into Manchester Piccadilly ready to form the 15:27 service to Scarborough on August 25th. *Barry Longson*

TransPennine Express

Class 68 022 waits at the signal at Stockport on August 10th working a Crewe to Longsight move. *Steve Stepney*

Class 397 002 working a Manchester Piccadilly to Edinburgh service stops to set down only at Bolton on August 22nd. *Steve Stepney*

Surprise visitors to Winwick as Class 20 901 and 20 118 work south from Kirkdale to Chaddesden on August 11th. *Jeff Nicholls*

New mural unveiled at Felixstowe rail station

A new mural has been unveiled at Felixstowe rail station to encourage local people to take the train and welcome visitors to the town. Commissioned and funded by the East Suffolk Lines Community Rail Partnership, in partnership with Visit Felixstowe, Felixstowe Travel Watch and Greater Anglia the mural displays images of Felixstowe's attractions such as the beach and Landguard Fort, and also encourages people to take the train with the slogan 'Days out by rail – your adventure awaits'.

It replaces an older, faded sign to create a better first impression to visitors arriving or departing by train.

The East Suffolk Lines Community Rail Partnership Line Group East Chairman, Cllr Graham Newman, felt the new board should reflect that new trains are now running on the line and feature images of the attractions in Felixstowe – The Spa Pavilion, Landguard Fort, Felixstowe Museum, Martello P Tower, the Pier, the two connecting ferries (Bawdsey and Harwich) and scenic images.

It was unveiled by Cllr Graham Newman; Aaron Taffera, Chair of the East Suffolk Lines Community Rail Partnership; Richard Holland, Felixstowe's Station Adopter and Vice Chairman of Felixstowe Travel Watch; and Alan Neville, Greater Anglia's Customer and Community Engagement Manager, on Friday August 6th.

Helen Greengrass, for Visit Felixstowe, said, "We are delighted to see the new welcome board at Felixstowe Station. It provides an immediate impression of a vibrant resort encouraging visitors to discover Felixstowe."

Aaron Taffera, Chair of the East Suffolk Lines Community Rail Partnership, said, "The mural looks great and the Community Rail Partnership is pleased to have been able to support this project which provides a colourful welcome to the station and encourages people to explore the town."

Greater Anglia's Customer and Community Engagement Manager, Alan Neville, said, "We're pleased to have supported this partnership project which is putting the rail station at the heart of its community and encouraging people to leave the car at home which will help to reduce congestion and pollution in the town."

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

Found a journey where an anytime single from A to B is cheaper than a single from B to A - is this common?

Q: So I was looking at a return from Reading to Longcross and I saw that an anytime single from Reading to Longcross was listed as £8.90 whereas an anytime single from Longcross to Reading is listed as £9.50. I checked these fares on brfares (Tickets from READING to LONGCROSS - BR Fares) and it shows that these fares are correct as I expected to see.

However, I don't think I had ever seen a journey before where the anytime fare one way is different to the fare when travelling the other way - do people know any other examples of this or perhaps this is very common and I've just never seen it before.

A: Sometimes happens with fares in the South East area. More usual is for cheaper fares between two stations when travelling away from London than into London. Stevenage to London Anytime Day Return is £23.90 London to Stevenage Anytime Day Return is £21.80

It's much more common for returns than for singles, particularly for travel in the London & Southeast area, with flows to/from the London area having differentials.

It's absolutely stupid how this can happen, Aylesham to London Victoria super off peak is £26.60 (Arriving after 12pm) £38.00 Off Peak (arriving between 10am - 12pm)

The other direction London Victoria to Aylesham a Super off peak is £30.30 (departing after 10am) and the off peak ticket doesn't exist so you need to buy an Anytime ticket, it'll cost £40.20 (if you depart before 10am)

Anyone with any rail knowledge would pre book an AYH to VIC ticket and use the tickets the wrong way round to save a few quid.

However using the outward half after the return half is a violation of the ticket terms, to what extent that is enforced on routes where there is a cost discrepancy I don't know. In theory a ticket inspector can ask to see an unused return portion, when any passenger presents an outward portion.

However the only time I've ever been asked to see an unused return portion, was when I used a ticket valid for a calendar month on the final day of validity. I think the Guard was almost disappointed I was actually able to produce the unused return portion. This was back in GNER days.

I've never known this happen for a Day Return, nor for any return where the outward portion has been used on the first (or even second) day of its validity.

Compulsory reservations and walk-up tickets

Q: I am considering a trip as follows: 6 Sep Southport to Wylde Green, 8 Sep Wylde Green to Birmingham International and then to Southport. Senior Railcard Off Peak return fare applies. I suppose I will need a Day Return Birmingham New Street to Birmingham International as well. I could just buy the Southport to Wylde Green ticket at the Merseyrail ticket office at Southport on the day, but I am concerned about the issue of compulsory reservations, which are mentioned when I look online at TOC site to sell the tickets. If I just walk up and buy the tickets before travel, what's the situation with reservations? If I buy online and request reservations, what is my position when I board the 14.55 at Birmingham International, heading for Wigan, when any reservation I might have will start from New Street?

A: You don't need reservations on any of those services. In fact the only operators insisting on reservations are Caledonian Sleeper and Grand Central, neither of which you'll be taking.

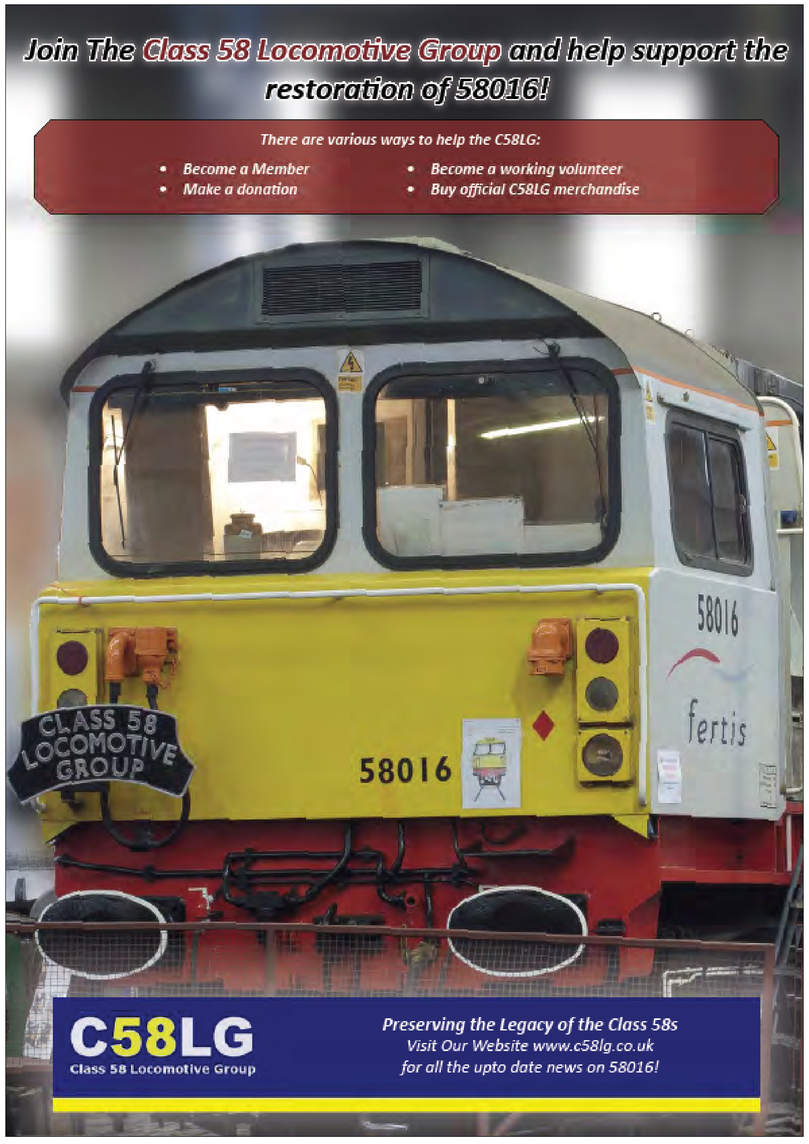
The reason that booking engines will be telling you that you 'must' have a reservation is that the timetable data isn't very granular. There's no way for TOCs to set it so booking engines are forced to issue a reservation (so they can monitor the number of people intending to travel on a given service) without booking engines interpreting this as meaning that reservations are compulsory for that service.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

National Rail

A recent arrival at Leicester depot is former Wolverton works shunter Class 08 629 which on August 10th was seen shunting 56 091, 56 301, 56 098 and another new arrival in the shape of long withdrawn 60 060 around the depot. *Lee Stanford*



More Greater Anglia trains due to run from September

Greater Anglia is due to start running more trains from September as more people are expected to return to the railway as commuters are encouraged to return to the office and new school and college terms start. An extra 12 services every weekday and eight at weekends are being added to the Norwich to London Liverpool Street intercity service – and two express Norwich in 90 services are being reintroduced. The full timetable is being restored on the Great Eastern mainline service between London Liverpool Street and Southend Victoria, Braintree, Colchester, Colchester Town, Clacton/Walton, Harwich and Ipswich.

Five additional services are being added to the West Anglia mainline, which runs between London Liverpool Street and Cambridge and on to Kings Lynn – but not all of the five services go to Kings Lynn.

All additional services will start from the week beginning Monday September 13th, although two schools' services commenced from Thursday September 2nd – the 15:57 Ingatestone to Colchester and the 06:50 Colchester to Norwich services.

Jamie Burles, Greater Anglia managing director said: "As restrictions have been lifted we've seen our trains get busier on many routes. We anticipate further increases as the Government is encouraging people to return to working from offices. We revised our timetable several times during the pandemic to reflect the impact of Covid restrictions on passenger numbers and throughout that time we ran a safe and reliable railway. We are continuing to clean and sanitise our trains, paying attention to high touch areas. Regular independent random Covid tests have been carried out on our trains and all have come back negative. For people who would still rather travel on quieter trains, we have an improved less busy trains tool on our website, where people can see at a glance which are the quietest stations at every station to and from London Liverpool Street. We also remain committed to running a punctual railway and currently on average 95 per cent of our trains are on time."

The express Norwich in 90 services, which call only at Ipswich and make the journey in 90 minutes, will be at 08:00 Norwich to London and 17:00 London to Norwich. As a result of these changes, there is now a near normal weekday and Saturday intercity service in place and a full service on Sundays. Additional West Anglia services are: 06:47 Cambridge to London Liverpool Street, 06:18 Kings Lynn to London Liverpool Street, 08:03 and 08:33 Liverpool Street to Cambridge and 17:37 Liverpool Street to Cambridge North.

There are no changes to the revised Stansted Express service which is currently operating with between two and three services an hour. A small number of intercity services will be operated by trains without First Class seating, with details available on the Greater Anglia website.

Toton Depot

On August 17th, EWS stored locos in Toton Yard sidings included Class 60 088 and 60 003. *Michael Lynam*

EWS branded Class 60 057 stands amongst others stored in the 'Compound'. *Michael Lynam*

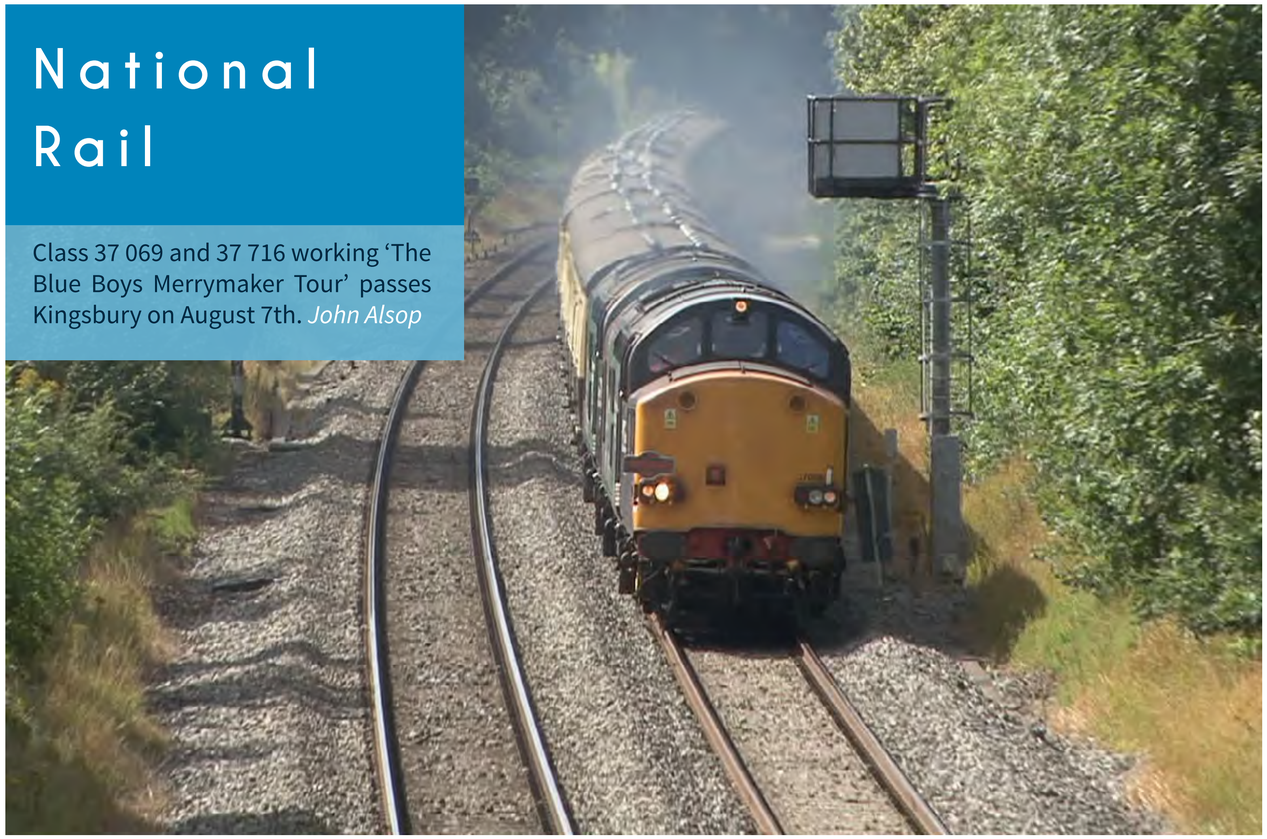
Class 66 109 'Teesport Express' in PD PORTS livery adds a touch of blue to the sea of red at Toton. *Michael Lynam*

Recently returned from France, Class 66 028 in Euro Cargo livery awaits repairs and conversion back to UK spec. *Michael Lynam*

DC Rail Freight's Class 60 055 'Thomas Barnardo' is seen at the depot. *Michael Lynam*

Class 66 009 and 66 156 arrive in Toton Yard with a rake of loaded box wagons from Downlow Briggs Sidings. *Michael Lynam*

National Rail



Class 37 069 and 37 716 working 'The Blue Boys Merrymaker Tour' passes Kingsbury on August 7th. *John Alsop*

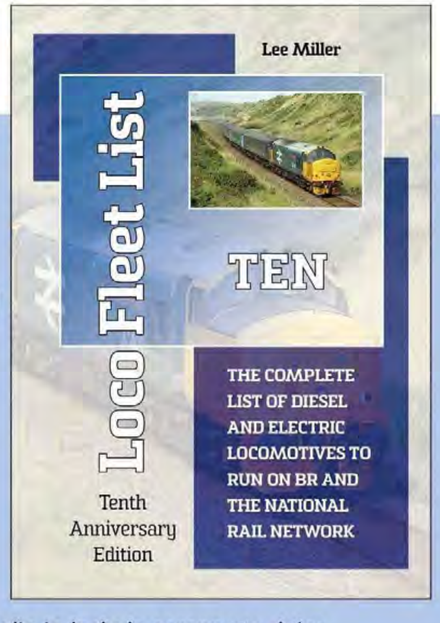
Loco Fleet List Ten

This publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

Features:

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric & Bi-Mode Locos
- Eurotunnel Locomotives
- Unclassified Locomotives



Loco Fleet List Ten is available via mail order for just £12.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or using Paypal when visiting the Loco Fleet Shop website.

Web:www.locofleetshop.co.uk Email:lee@locofleetshop.co.uk

This special anniversary edition has undergone a complete rewrite to include scrappage dates, locations and allocations of all preserved and operational locomotives now in a perfect bound book

Hitchin's history on show in station subway murals

The operator of Hitchin's train services has installed a pair of dramatic murals to brighten the station's subway for passengers. The two murals, each 15 metres long, tell the town's history since the mid-19th century using around 200 photographs from the North Herts Museum's collection. The artworks were created by community and environmental charity Groundwork East. Govia Thameslink Railway (GTR), parent company of Great Northern and Thameslink, has commissioned the charity to carry out community art and landscaping projects at 19 Great Northern and Thameslink stations. Their projects are part of GTR's multimillion-pound, network-wide station improvement programme.

Groundwork East's Assistant Landscape Architect Becca Huggins and Project Assistant Eliza Morris designed the photographic collages, working with the Museum's Assistant Curator Matthew Platt. They arranged the copies of the pictures provided by Matt into 11 varied topics important to the market town, including Agriculture, "Captured Moments", Football, Shops and War. The oldest photograph dates from the 1850s.

Becca Huggins said "This was a lovely project to work on, as it brings to life the rich history of the town, whilst improving the station's subway, making a better commute for all. It's great to see the pieces come to life and to create a better place for the local community. Connecting people with places and bringing communities together is what Groundwork is all about, and this installation really achieves that."

Matthew Platt said: "We're really pleased to have so much of our photograph collection on show, making such a difference for rail passengers. Groundwork has done a fantastic job. Although the pictures of unknown people are fascinating, some of my favourites are those we have a bit of background knowledge about, such as basket-maker George Day, who is shown at work in his tiny shop. Another striking photo from the Captured Moments section shows supporters of the MP Dr Hillier, gathered to cheer his 1910 election victory. The Football pictures have an interesting back story because what's believed to be the world's first museum of football was founded in Hitchin - its collection of almost 1,000 objects was donated to our museum in the 1970s."

MP for Hitchin and Harpenden Bim Afolami visited the station on August 6th to see the mural and meet its creators, and for an update on other improvements at the station, which has been provided with new information screens and secure cycle parking.

Karen Gregson, Area Manager for Great Northern and Thameslink said: "On behalf of our customers and colleagues at Hitchin, I'm delighted to thank Groundwork East and North Herts Museum for bringing their brilliant idea to life with this spectacular artwork. It's a really evocative expression of Hitchin's identity that helps make the station feel part of the community we serve. And it's the crowning glory for improvements we've made at the station including new information screens and secure cycle parking."

Photo: Historic scenes: Matthew Platt of North Herts Museum tells Herts County Councillor Phil Bibby and GTR Area Manager Karen Gregson how the station's photographic history murals were created. ©TSGN

On August 4th, Colas tamper No. DR75406 passes Dawlish working 6J83 Tavistock Junction - Taunton and return. *Steve Thompson*

The train on platform 3 is for Hollywood...

What do Killing Eve, Breeders, I Hate Suzi and the film Yesterday all have in common? The answer is they were all filmed on location on Greater Anglia trains or stations. They are among an increasing number of films, TV dramas and documentaries, adverts and even fashion shoots which use the railway in East Anglia as a backdrop. Since 2018, Greater Anglia has employed Adrian Booth to act as a commercial film liaison manager. The company was getting regular requests from film-makers to use Greater Anglia locations, but was turning them down as there was no-one who could make all the arrangements on top of their existing jobs.

"We really wanted to support the British film industry and also our local communities and businesses by facilitating filming requests, so we decided to hire someone whose sole job is to make all the necessary arrangements so filming could happen," said Martin Moran, Greater Anglia commercial director. "Not only does hosting the film crews boost the local economy around the station where filming is taking place, but it puts another string in our region's bow as an ideal place for filming to take place – if production companies know that filming on trains and stations is an option in this area. It's also good to be supporting the British film industry – although it's not restricted to this nation's film industry – we've also had major Bollywood shoots on our trains and stations."

One of the first films with a Greater Anglia backdrop was Yesterday – the Danny Boyle and Richard Curtis film starring Himesh Patel who wakes up after a knock to the head in a world where the Beatles don't exist and then goes onto become famous wowing the world with their songs. The film was made on location in East Anglia – including a shoot involving hundreds of extras on Gorleston beach, near Great Yarmouth, and a cameo appearance by Ed Sheeran. Eagle-eyed rail enthusiasts may have spotted one of Greater Anglia's quietest rural stations, Buckenham, in the film. Buckenham, a request stop on the Norwich to Lowestoft line, was the location of a recording studio where Himesh Patel's character recorded an album. Buckenham station was chosen because the former station building is a recording studio in real life, called Sonic Fruit. The film script was slightly tweaked because Danny Boyle was so taken with the real-life studio. The studio in the film was named "Tracks on the Tracks" and recording of the album was paused while a train went past. The train was originally a Greater Anglia train, but it was adapted in production to be faster and longer. Bennet Maples, Sonic Fruit's head engineer and studio owner, said: "It was a huge thrill to meet Danny Boyle, and so exciting to see a film of this size utilise locations in this area. There is a thriving film industry in East Anglia which we are extremely proud to be a part of, and it was great to see Danny Boyle and (screenwriter) Richard Curtis embrace that."

Adrian has worked on six films, 20 TV dramas, 12 adverts, numerous corporate videos, entertainment and documentary TV shows, short self-funding films and one fashion shoot at Greater Anglia locations. He takes initial calls, explores how requests can be facilitated and liaises with different departments across Greater Anglia – finally accompanying all filming.

Images of railway carriage interiors, stations and passing trains are often used by film-makers as backdrops to convey a sense of movement and to provide a perfect segue to move characters from one location to the next. Stations are places of arrival and departure and are handy locations for dramatic moments to unfold, while seated passengers often exchange key dialogue. In Killing Eve, a dramatic chase involving Eve and Russian baddie Konstantin took place on a Greater Anglia platform at Liverpool Street station with Villanelle escaping on board one of the train company's Stansted Express trains. In the drama, Liverpool Street was actually an unnamed station in Scotland. Greater Anglia's train planning team made some platform space available at Liverpool Street and supplied a train overnight one Sunday for the filming.

Greater Anglia lead train planner Michael Lewis said: "Generally when we supply a train and crew they are able to shunt up and down in a platform at the request of the film director. The biggest plan for us was for an Apple TV show which required two platforms at Liverpool Street and a number of additional services so that they could film on the go on board during two days of filming one weekend. We were able to take advantage of the reduced service due to the lockdown – it would have been considerably more challenging in normal times."

Michael added: "It normally works by Adrian either contacting me with a rough proposal and then after a fair bit of toing and froing we get a clearer idea of what's required by the film company and what's actually possible. Then we go away draw up plans, send these back to Adrian who will then get confirmation for us to go ahead. There have been a few that we haven't been able to accommodate due to timescales or other impracticalities, but generally we are normally able to help."

Some of Greater Anglia's stations close to London have proved popular filming locations due to their proximity to London and the M25 – such as Hertford East, Cambridge, Stansted Airport and Southend Victoria lines.

On occasions, Greater Anglia staff have also played parts as extras. Recently Ivor Wilson, who works at the ticket barrier at Liverpool Street station, had a supporting actor role in Magpie Murders, an Apple TV Anthony Horowitz production currently still in production.

"I played myself," said Ivor. "All I had to do was to check tickets as "passengers" walked through the exit gates. It was a very interesting day. It was amazing to see how much work goes into filming and how much effort and time goes in."

Adrian said: "A lot of time is spent looking at production teams' requests and suggesting ways in which they might be facilitated. Access requires careful planning and needs to be carefully managed. We cannot allow customer access to be limited or for passengers to be inconvenienced – and we definitely can't delay services. We select quieter times when customer numbers are lower, which limits the impact on customers. We have to make sure that all health and safety requirements are met – as the railway has many potential hazards.
Generally there's a buzz among Greater Anglia staff when we are working with film/TV and high end drama productions. It's something interesting and different. Catching a glimpse of a celebrity is always enjoyed. It's fascinating to see behind the scenes of these productions. There are so many people involved and so much equipment. It's a bit like the circus coming to town. Crews of 60 are not unusual, at times there are even more, with supporting actors. Jack Ryan saw around 120 people involved in the production. Although it's not always the case – sometimes there is a crew of just ten, including actors."

So next time you're on a Greater Anglia train or station, look a little closer – you may just recognise it from the TV or big screen.

National Rail

On August 4th, LMS Royal Scot Class No. 46100 'Royal Scot' worked the 11 coach Saphos Trains 'Magna Carta' special from Crewe to Salisbury aided by 47 853 at the rear, seen passing through Andover. *David Lindsell*

Key Manchester rail route gets 21st century signalling upgrade

A once in a generation overhaul of Manchester's railway signalling system is complete to improve future journeys for passengers and freight. Equipment which was nearly 40 years old around Trafford Park has been replaced with the latest digital technology. Network Rail has installed a total of 23 new signals and a further 109 pieces of associated signalling equipment as part of a £36m Great North Rail Project investment. The work will improve reliability and safety for passengers and freight on this important route into Manchester. It will also allow longer freight trains to run in the North West taking traffic off the region's roads. Now the work is complete a total of 26 signals are controlled from Manchester's state of the art signalling centre.

Roisin Nelson, sponsor for Network Rail, said: "This major work on this key rail artery into Manchester will transform connectivity for both freight and passengers across the North West. Work like this has never been more important - future proofing this economically important rail link as Britain emerges from the coronavirus pandemic. I'd like to thank passengers and residents for their patience while we delivered these improvements over the last year. The investment will keep passengers on the move, products on supermarket shelves and vital goods going to businesses across the country for decades to come."

Chris Jackson, regional director at Northern, said: "Our customers are at the heart of everything we do and the work carried out by colleagues at Network Rail will ensure our customers are able to travel on a more modern and more efficient rail network.
We're proud to be part of an industry that is delivering so much for the people of the North and the work to improve the infrastructure goes hand-in-hand with our own improvements which, over the past 18 months, have seen the full introduction of 101 new trains, the complete refurbishment of our older trains and significant enhancements at our stations."

The upgrade started in August 2020 and finished over the August bank holiday weekend. Signalling equipment between Flixton Station and Manchester City Centre has been modernised, as well as improvements within Trafford Park Depot estate.
Signalling upgrades to Freightliner Manchester terminal, DB Cargo & GB Railfreight at the Trafford Park Euro Terminal also took place. This will bring huge benefits to the rail freight companies, increasing the frequency and length of trains they can run and goods they can carry.

Tim Shakerley, UK rail managing director for Freightliner, said: "Manchester is a key location for Freightliner with eight trains currently operating on a daily basis to key intermodal ports at Felixstowe, London Gateway and Southampton. This investment will allow us to continue our train lengthening trials which has seen us running the longest intermodal trains in the UK at 775 metres, increasing the efficiency and productivity of our services. Moreover, there are significant environmental gains from running longer and heavier services. Moving more freight from road to rail will help ease congestion on the UK's busy roads and thereby reduce CO2 emissions within the supply chain."
Ian Langton, production director of GB Railfreight, said: "The new state-of-the-art signalling system serving Trafford Park will further enhance reliability on this vital freight route into Manchester. This major investment will provide better connectivity, whilst supporting intermodal volume growth enabling more goods to be delivered sustainably across the country."

National Rail

On August 26th, Class 20 901 and 20 118 pass Chesterfield working light engine from Leeds Balm Road - Chaddesden following wheel turning. *Michael Lynam*

Shunter Class 08 551 'Zippy' is seen on shunting duties at Locomotive Services at Crewe. *Michael Lynam*

National Rail

Network Rail adds FINSBURY PARK to Seven Sisters bridge

A famous Finsbury Park landmark now welcomes people in the community, visitors and passengers using the station to the area. Network Rail teams installed red 'Finsbury Park' lettering on the side on Seven Sisters bridge.

The vinyl letters – which are 150cm tall – were put in place separately during an overnight road closure to allow workers to safely access the bridge.

This follows major work to tidy up Seven Sisters bridge and give it a fresh coat of green paint.

Paul Rutter, Route Director for Network Rail's East Coast route, said: "We've worked closely with Islington Council to brighten up Seven Sisters bridge and it's great to see the 'Finsbury Park' lettering in place.

It will welcome residents and businesses in the community, as well as visitors to Finsbury Park, for years to come."

Islington Council's Executive Member for Inclusive Economy and Jobs (and ward councillor for Finsbury Park), Cllr Asima Shaikh, said: "On behalf of the Finsbury Park ward councillors, I am delighted that the council has worked together with Network Rail to get the Finsbury Park sign painted. We know that our local community will welcome this as it strengthens Finsbury Park's identity and provides a bold and recognisable landmark. Finsbury Park is a really vibrant town centre area, with brilliant businesses, enjoyed and represented by a diverse range of residents and visitors. This colourful, striking new sign will boost the sense of cohesion that makes Finsbury Park such a lively and welcoming place."

Specialist divers are pouring underwater concrete to protect two major railway viaducts carrying the West Coast main line in Carlisle.

Detailed laser surveys carried out by Network Rail showed fast flowing water on the River Eden has caused parts of the riverbed to wash away posing a risk to the viaduct foundations. Because of the deteriorating riverbed condition, trains have been running at reduced speeds of 20mph over the Victorian and 1940s-built structures. Approximately 900 tonnes of special setting concrete is now being poured by the diving teams to provide a stable platform for the viaducts' columns or piers.

The immediate repairs are being made to the structures as part of a £1.3m Great North Rail Project investment. Once this first phase of work is complete in the next few weeks, trains will be able to run at full speed of 100mph over the viaducts, meaning faster, more reliable journeys for passengers and freight.

Chris Pye, Network Rail infrastructure director for the North West, said: "It's not every day you call in diving teams to help improve railway lines, but this work is essential to keep passenger and freight trains moving on the West Coast main line over the River Eden in Carlisle.

After using the latest laser mapping technology to give detailed scans of the riverbed we brought this work forward so we could secure this crucial rail link between England and Scotland for the winter ready for the second phase of work next summer."

The professional divers from Scour Protection Ltd work in challenging conditions to shore up underwater structures like bridges and viaducts around the UK and beyond. Water visibility in the River Eden is particularly poor, with a lot of the work done by touch alone.

More than 2200 tonnes of rock has also temporarily been put into the river to calm the waters and divert its flow so the divers can work under the surface.

Network Rail's ecology teams have been working closely with the Environment Agency and Natural England to monitor the river and make sure this work has the least impact possible.

The concrete is made from a mix with 'zero leach' meaning it's wildlife friendly and safe for the environment.

The second phase of viaduct strengthening work will take place in Summer 2022 as a permanent fix to the riverbed erosion.

First trains travel on proposed Northumberland Line route

Special rail services have taken place between Newcastle and Morpeth as plans to reintroduce passenger trains on the Northumberland Line gather pace. Northumberland County Council and Northern hosted the events which saw trains travel on part of the line – taking in the route that will see five of the six proposed new stations built.
As well as the new stations – Northumberland Park, Seaton Delaval, Newsham, Blyth Bebside, Bedlington and Ashington – the Northumberland Line will also result in an upgrade of 18 miles of track to provide local communities with enhanced connectivity.

The scheme, proposed by Northumberland County Council, has been made possible thanks to the Government's Restoring Your Railway Fund, which offered development funding to explore options to restore lost rail services connections to communities.
Earlier this year the Department for Transport provided £34m towards detailed design and preparatory works which, subject to funding for the delivery of the full scheme being confirmed by the Government, and the recently submitted Transport and Works Act Order (TWAO) application being approved, will allow for the reintroduction of a regular rail passenger service between Ashington and central Newcastle, with several stops in-between.

Cllr Glen Sanderson, leader of Northumberland County Council travelled on the special service. He said: "It was fantastic to experience first-hand one of the journeys that hundreds of thousands of people will soon be able to enjoy and benefit from. Passenger services on the Northumberland Line will provide a huge economic boost in South East Northumberland and beyond, improve transport links, attract more visitors, and support growth sectors. It will also help to improve air quality and reduce carbon emissions, contributing greatly to our climate change targets in Northumberland. This is just one of the exciting projects taking place in the county which will benefit our residents, business and most importantly our environment for years to come."

The Northumberland Line, currently partially used by freight trains, aims to further stimulate and support economic growth, regeneration and community development in Northumberland and the surrounding regions by providing new and improved transport links for local people and businesses. By doing so, the scheme will improve access from towns such as Ashington and Blyth to employment hubs like Newcastle, as well as opening up new opportunities for leisure, education and travel. It will also provide a real incentive for potential employers to relocate to and invest in the local area.

Cllr Martin Gannon, Chair of the North East Joint Transport Committee, said: "The Northumberland Line will be a wonderful asset for local people and helps us take further steps to encourage people out of their cars and onto cleaner, more sustainable forms of transport.
This development demonstrates that the region has major ambitions, restoring passenger rail services has enormous benefits and this scheme is one of the major interventions which has been identified and agreed by our region in the North East Transport Plan. The line will offer enhanced opportunities for education, employment and leisure for the people of the North East and enhances public transport connectivity, offering a seamless transfer onto Tyne and Wear Metro at Northumberland Park."

With the new line set to open in early 2024, Northern – which will operate all passenger services – is already developing plans to provide a timetable that will help local communities and deliver this positive impact for the region.

Kerry Peters, Regional Director at Northern, said: "Bringing new rail services to the north east as part of the Northumberland Line is really exciting and we're honoured to be able to provide those services for all the communities based along the route. Rail plays a vital role in the economy of the north of England and we're delighted to be able to play our part in opening up new leisure and business opportunities for the region. We're currently working on proposals for the first timetables for the Northumberland Line and, initially, expect to offer and two trains per hour on weekdays and Saturdays between 6am and 7.30pm, with an hourly service after 7.30pm and on Sundays."

Work on the Northumberland Line is expected to begin next year and, with Morgan Sindall in place to construct the new stations, Network Rail is now working on its own plans to upgrade the track and infrastructure.

Matt Rice, Route Director for Network Rail in the North and East, said: "We're really excited to be able to be part of to the eagerly anticipated reintroduction of passenger services on the Northumberland Line. We're confident that when the first passenger trains run in 2024 that they will be very well used by the local community, building on the significant contribution that freight services on the Northumberland Line already makes to our economy.
The project will provide more employment and leisure opportunities for people across South East Northumberland, and it will help to boost the economy and attract new investment into the area."

Railway fly-tipper fined thousands after home address found in waste

A fly-tipper has been convicted and ordered to pay £3000 after his home address was found in illegally dumped waste on railway land in Lancashire. Piles of rubbish from a home improvement project were dumped at a track access point at Burnley earlier this year.

Railway access points are needed 24 hours a day so engineers can carry out essential maintenance. They also provide emergency access so blocking them risks lives. The culprit was caught when an invoice for building materials, displaying their name and address, was found amongst the mess.

The matter was handed to the British Transport Police, and court proceedings began. After pleading not guilty at Burnley Magistrates in May, a judge found the DIY delinquent guilty after a trial at the same court on July 14th.

He was fined £1000 and ordered to pay court costs and compensation to Network Rail – totalling £3000 - for illegally dumping floor tiles, planks of wood, and a bed frame on Network Rail property.

Ian Croucher, maintenance protection coordinator, said: "I hope this case shows a strong message that Network Rail will do everything it can to track down illegal fly-tippers and work with the British Transport Police to bring them to justice. Not only is illegally dumping waste like this hazardous to our staff who have to clear it up and a risk to railway passengers, it's also a blight on the environment. It costs millions of pounds of taxpayers' money to clear waste like this every year – money which should be spent improving journeys for passengers."

Chief Inspector Dave Rams, from British Transport Police, said: "Fly-tipping costs the railway millions of pounds each year which could be invested in the railway network. This offender's actions have cost him dearly and we hope this acts as a deterrent to others who are thinking of doing the same thing."

Fly-tipping is a criminal offence and carries a fine of up to £1,000. Network Rail uses covert tactics and works closely with the British Transport Police to catch criminal fly-tippers. Hidden cameras are installed in known 'grot spots' to gather evidence so those responsible can be taken to court.

Revised proposals for Forth Bridge Experience

Network Rail has submitted a pre-application notice to City of Edinburgh Council for revised proposals to install a bridge walk and visitor hub at the iconic Forth Bridge.

The revised proposals include a low-level reception hub to the east of the Forth Bridge, further away from neighbouring residential properties, minimising the impact on the surrounding environment.

The pre-application process will include online engagement meetings to communicate the revised proposals to the public and gather feedback which will help inform the final designs.

A full planning application, including plans, artist impressions and detailed designs will be submitted later this year following the public engagement exercise.

The proposals will see construction of a bridge walk and reception hub on the South Queensferry side of the UNESCO World Heritage site, which will be used for preparing those heading out on the bridge walk as well as providing an access point to the structure.

Groups of between 12 and 15 people will put on safety harnesses before being led out onto the bridge's south cantilever, walking up to a viewing point at the top using walkways built into the structure.

Alan Ross, Network Rail Scotland's director of engineering and asset management, said: "The events of the past year have prompted us to look more closely at all of our projects to consider how they could be improved or made more affordable in such challenging conditions. The project team has worked extremely hard to draw up revised proposals without compromising the desirability of this exciting project."

RECOVERY ON TRACK AS BRITS PLAN A 'DOUBLE BASH' THIS FESTIVE SEASON

London North Eastern Railway (LNER) has launched thousands of tickets on sale to allow people to book ahead for Christmas 2021. After the disappointment of Christmas 2020 which saw plans changing at the very last minute due to Covid restrictions, research by LNER has shown that the appetite for a bigger Christmas this year is strong with 65 per cent of people planning a 'double-bash' to make up for 2020. Demand for rail travel on LNER services is significantly on the increase with nearly 200,000 weekly journey searches from potential customers on the LNER website, which is just short of pre-pandemic levels. Along with this, passenger journeys exceed 90 per cent of their pre-COVID levels covering on average 375,000 journeys per week in the past several weeks. These promising numbers show that recovery is well under way for the LNER route and this winter will see more people looking to travel by rail.

The LNER route plays host to some of the UK's favourite festive towns and cities, which will reap the benefits of leisure and weekend travellers returning for day trips and short breaks over the winter. Almost half (48 per cent) of people are looking to travel away from home this Christmas to see family and friends and 30 per cent of those are looking to book at least six weeks in advance. The Advance tickets, which are available for up to 4th January, will be welcome news for those looking to make plans for the winter. Six out of 10 of those polled are looking to make travel plans ahead this year and 68 per cent are looking to make Christmas 'extra special' this year. Those looking to treat themselves could benefit from planning and booking ahead as 47 per cent said they would consider upgrading to First Class on a train this Christmas.

LNER Managing Director David Horne said: "Over the past couple of months we have seen signs that leisure rail travel is on the rebound, with our long-distance services becoming busier than they have been in the past 18 months. The fact that the number of customers planning journeys on the LNER website is almost equal to that of our pre-pandemic numbers is hugely promising. We're pleased to see that customers are feeling confident to travel by rail and we're excited to host people who are looking to explore the East Coast route this winter. Whether they are planning to go ice skating in Edinburgh, Christmas shopping in Newcastle, heading to the Christmas Festival in York or seeing the Christmas lights in Leeds there is something for everyone to experience after the disappointment of last Christmas. We hope that our customers can feel secure when making bookings with us and that planning ahead will give them something to look forward to in the coming months."

From Monday December 13th, LNER will operate a new weekday service in both directions between Middlesbrough and London King's Cross. The new direct service connecting Teesside with London offers fares starting from £20.60 in Standard and £60 in First Class when booked at lner.co.uk

Helium balloon halts trains on West Coast main line at Tamworth

A helium balloon has caused delays to rail passengers after it got tangled in 25,000-volt overhead electric cables which power trains on the West Coast Mainline near Tamworth. It's prompted Network Rail to issue a safety plea to the public to not let helium balloons loose near the railway.

The party balloon got caught on the high-voltage overhead wires On August 2nd causing passengers on six trains to be delayed for a total of 44 minutes. Engineers had to close the line and switch off the electricity so the balloon could be safely removed.

James Dean, Network Rail's West Coast South route director, said: "Whilst balloons are fun and bring a sense of celebration to any event, they can be dangerous and cause delays. Our advice is not let them loose outside, especially if you're near the railway. Leave them indoors away from high-voltage equipment so we can keep trains running on time."

Helium-filled balloons causes dozens of train delays for passengers across Britain each year. Network Rail has recorded over 600 balloon-related incidents across England, Scotland and Wales in the past ten years.

HISTORIC NEWCASTLE CENTRAL STATION FACILITIES RESTORED

London North Eastern Railway (LNER) is pleased to announce the restoration of historic toilets at Newcastle Central Station, believed to date back to the 1890s. Following the Beeching cuts of the 1960s, the number of train services serving Newcastle Station decreased and platform 12 was rarely used. The rooms along the platform, including the gentlemen's toilets, ceased to be used by the public, with other restroom facilities throughout the station made available for customers at the time.

Thanks to increased services and passenger numbers in recent decades, LNER has restored the toilets in partnership with the Railway Heritage Trust. The team worked hard to ensure the original glazed brick walls and flooring were brought back to life and their former glory.

The reopening of the gentlemen's toilets on platform 12 has enabled LNER to double the capacity of the women's toilets, making it even more convenient for customers to use the facilities at Newcastle.

Claire Ansley, LNER Customer Experience Director, said: "Newcastle Station has played an important role in the region for more than 150 years and we truly value its rich history and heritage. We have carefully restored these facilities to ensure that they both enhance the customer experience and are respectful of the building's heritage and architectural qualities."

Further improvements are planned at Newcastle Station, with the standard waiting rooms being refurbished throughout the Autumn.

Ride Dr. Frankenslime's Trick or Treat Express

Dr Frankenslime's Trick or Treat Express at the Spa Valley Railway 30 & 31 October 2021

Bring the whole family along to the Spa Valley Railway in Tunbridge Wells to laugh at Dr Frankenslime, the mad scientist, as he builds himself a bride!

Packed full of slapstick comedy, magic and mayhem – it's set to be another sell-out show on Saturday 30th and Sunday 31st October, departing from Tunbridge Wells West at 16:15 and 18:00, returning approximately 1hr 15mins later. The performance is brought to you by the wonderful Radtastic Theatre.

We will start the gruesome fun at Tunbridge Wells West Station with an experiment or two with the wacky Dr Frankenslime. Then we will board the steam hauled Trick or Treat Express to begin our journey to the haunted, Eridge station. Along the way, Dr Frankenslime will hand out activity packs and colouring pencils to all the little monsters onboard.

Upon arrival at the station, everybody will make their way on to the platform where the mad doctor will show you how to make his famous, glow in the dark slime, each child will get to take the revolting concoction home with them!

We will board the Trick or Treat Expressonceagain to travel back to Tunbridge Wells West, the Doctor asking each of you whether you want a trick or a treat along the way.

If you make it back to the station alive, we will bid you farewell!

Fares (includes train ride and show)

Adult - £15.00, Senior - £14.00, Child - £7.50, Family (2A+2C) - £35.00

Book tickets for the 16.15 or 18.00 departure from Tunbridge Wells West in advance at www.spavalleyrailway.co.uk

Murder Mystery Fish & Chip Suppers return to the Spa Valley

The popular Murder Mystery evenings with the 368 Theatre Company will return to the Spa Valley Railway in Tunbridge Wells on Saturday October 9th. The plot will unfold while on board the train after a murder is discovered in the sleepy little Cornish village of Morlington Hill during the 1940s. Police have drawn a blank on apprehending the villain, so passengers are called upon to sleuth it out and find themurdererover afewdrinksandsupper on board one of the heritage trains!

Whocansolvethemurderandperhapswin a prize? The evening starts at Tunbridge Wells West Station with a briefing at 18:15 sharp before everyone boards the train and the story starts to unfold. After departure, a fish and chip supper will be served and enjoyed as the train travels through the High Weald countryside to Groombridge. Upon arrival at the Groombridge station more of the story will be revealed and passengers will be invited to stand on the platform to make sure they don't miss out on the action.

The train will return to Tunbridge Wells West and another trip to Groombridge will follow, allowing time for passengers to come up with who they think may have committed the dastardly deed!

Bar car "Kate", will be open for the whole journey. The evening finishes back at Tunbridge Wells West in the Victorian engine shed when all will become clear. These evenings are great fun in groups so why not get a party together for this unique evening?

Menu choices (one option per person):
Cod & Chips
Sausage & Chips
Gluten-Free Battered Cod & Chips
Veggie Burger & Chips

Dessert:
Sponge cake

Dietary requirements must be requested at the time of booking and menu options must be chosen at time of booking.
The event will start at 18:15 and the train departs at 19:00. Arrival back at Tunbridge Wells West will be at approximately 21:45.
Adult Tickets are £40 and available from www.spavalleyrailway.co.uk

Gloucestershire & Warwickshire

Class 24 081 arrives at Toddington station on August 8th. *Neil Pugh*

1,000TH COVENANTOR RECRUITED FOR PROJECT TO BUILD BRITAIN'S MOST POWERFUL STEAM LOCOMOTIVE

2007 PRINCE OF WALES
Building Britain's Most Powerful Steam Locomotive

'Price of a pint of beer a week' regular donation scheme on-track to raise over £250,000 per year

The project to build new Gresley class P2 steam locomotive No. 2007 Prince of Wales is delighted to announce that it has recruited its 1,000th on-going 'P2 for the price of a pint of beer a week' covenantor or regular donor. The covenant scheme to build Britain's most powerful steam locomotive was launched in March 2014 and is now on-track to raise over £250,000 per year, having raised almost £2m to-date.

The Gresley class P2 2-8-2 'Mikados' were the most powerful express passenger locomotives to operate in the UK. They were designed by Sir Nigel Gresley in the 1930s for the London & North Eastern Railway (LNER) to haul 600-ton trains on the arduous Edinburgh to Aberdeen route. Sadly, the design was never fully developed, and they were rebuilt by his successor Edward Thompson into ungainly class A2/2 4-6-2 'Pacifics' in 1943/4 and scrapped by 1961. The A1 Steam Locomotive Trust (A1SLT - registered charity and builders of famous new 100mph steam locomotive No. 60163 Tornado) is building the seventh member of this class at its Darlington Locomotive Works (DLW) over ten years, at an estimated cost of around £6m through its P2 Steam Locomotive Company subsidiary.

Despite the impact of COVID-19, progress on the construction of our new Gresley class P2 'Mikado' is moving forward rapidly. The engine has reached the condition where it is recognisably a class P2 and the structurally complete tender tank and tender wheelsets are now at Darlington Locomotive Works (DLW). Construction and assembly work continues on all fronts, including boiler, wheelsets, tender, heavy motion, pipework and electricals. Design work for the extensively modified and improved cylinder block is complete with construction underway, with the focus now turned to adaptation of the Lentz rotary cam poppet valve gear to overcome deficiencies in the original design. More progress detail can be found at www.p2steam.com.

Our fundraising is also moving forward well:
The monthly 'P2 for the price of a pint of beer a week' Covenant scheme has attracted over 1,000 Covenantors – surpassing our 1,000 members target by the end of July 2021

The Boiler Club has already recruited 228 members of its 300 members initial target; The Tender Club has reached 106 members of its 250 members initial target; The P2 Support Coach Appeal 56 supporters of its 100 supporters initial target; The Injectors Club launched in June has already recruited 14 members of its 50 members initial target; and The Cylinder Manufacturing Club only launched in July has already recruited 26 members of its 250 members initial target

Our Dedicated Donation scheme has raised over £440,000
The Motion Club has passed its initial target of 175 members and will remain open until the final heavy motion is delivered; The Pony (Truck) Club has already passed its 20 members initial target with 32 members signed up, enabling the funding of certification costs; and The Turbogen Club has reached its initial target of 40 members

The Founders Club had a target of 100 members but thanks to the enthusiasm of our supporters we recruited over 360 members; The Mikado Club reached its extended target of 200 members to fund the wheeling of the engine and tender; and The Cylinder Club reached its initial target of 100 members to fund the redesign phase of the cylinder block.

Altogether this means that over £4m has been spent and more than £4m raised of the estimated £6m required to complete No. 2007 Prince of Wales within the next two years, if Gift Aid is included.

Supporters can become a P2 Covenantor (regular donor) from as little as £2.50 per week by going to the Trust's new online donations pages at www.p2steam.com/support/regular-donations, emailing enquiries@p2steam.com or calling 01325 460163.

Mark Allatt, Trustee, The A1 Steam Locomotive Trust, commented: "Having already built one steam locomotive - No. 60163 Tornado - from scratch, the levels of support and interest that have been generated towards our new Gresley class P2 No. 2007 Prince of Wales have been nothing short of sensational. Over the past eight years, the project to build Britain's most powerful steam locomotive has spent more than £4m on design & construction and raised over £4m of the estimated £6m required to complete No. 2007 within the next two years – and, in spite of the impact of COVID-19, completion is now within sight. Coincidentally the last of the former Gresley class P2s, No. 2002 Earl Marischal which had been rebuilt as a Thompson class A2/2, was scrapped 60 years ago in July 1961 in its final identity as No. 60502.

The 'P2 for a price of a pint of beer a week' covenant (regular donation) scheme has recruited it 1,000th on-going supporter meaning that it is now on-track to raise over £250,000 per year, having raised almost £2m to-date. If you would like to see a new Gresley class P2 sooner rather than later, I would encourage potential supporters to get on-board."
