Railtalk Magazine

Welcome to Issue 81 of Railtalk Magazine. Each month we bring you a jam-packed round up of the best pictures, news and reports.

Firstly this month we have to say Happy Birthday to D1062. The locomotive celebrated its 50th Birthday this month with a party on the Severn Valley Railway. I do have to wonder how many of the Class 66s will be celebrating their 50th birthday on a preserved line in years to come? Also this month, sticking with the Birthday theme we had the magnificence of Steam on the Met as London Underground celebrated their 150th Birthday, with steam specials running on selected lines. Hopefully, this was so popular that it will become a common sight and a regular yearly event.

Also this month, I have to bring to your attention the fact that there has been a rumour it has been a good month weather wise. Well have a look at the pictures and decide for yourselves, as I write this I am looking at grey skies and thick cloud!

Andy Patten

This issue wouldn't be possible without: Richard Hargreaves, Paul Godding, Carl Grocott, Dave Harris, Jon Jebb, Derek Elston, Pete Cheshire, David Mead, Brian Battersby, Steve Andrews, David Hollowood, Steve Thompson, Richard Jones, Gary S. RETRO RAILTOURS LTD

The Retro Fenland Explorer - Saturday 31st August 2013

WWW.RETRORAILTOURS.CO.UK

Come and join us on Retro Railtours' Fifth anniversary tour, The Retro Fenland Explorer on Saturday 31st August. Picking up from Crewe and selected stations in Cheshire, we continue over the scenic Pennine route through Yorkshire, before heading along the East Coast route to Peterborough, then branching off on the line towards the pleasant city of Norwich and the traditional East Coast seaside resort of Great Yarmouth.

You have to choice of alighting at Norwich, which boasts a wealth of historic and cultural sights, as well as some fantastic retail therapy opportunities as well as a variety of interesting inns - with several featuring in CAMRA's Good Beer Guide. You will have around 4 hours to explore Norwich.

Alternatively, remain on board as we continue to Great Yarmouth, which is famous as being on average one of the driest seaside resorts in the country! Obviously, we can't guarantee good weather, but we can guarantee that you'll be able to enjoy fish & chips, and spend a few pennies at the numerous arcades along the seafront! Once home to Vice-Admiral Horatio Nelson, the town has strong sea-faring roots. There is a museum and monument dedicated to Nelson, who was killed at the Battle of Trafalgar, in the town centre. You will have just over 3 hours to explore Yarmouth.

We expect this tour to be very popular, so to avoid disappointment, book now!

The following timings are provisional and will be subject to change.

	Outward (dep)	Return (arr)
Crewe	06:00	23:20
Stockport	06:40	22:45

SOUTHERN COUNTIES RAILWAY SOCIETY

A club for anyone interested in the railways of Southampton, Hampshire, Dorset and the surrounding area.

Established in 1948 by a group of school friends who shared the common interest in transport, particularly the Railways. The aim of the Society was to foster an interest in rail transport by arranging meetings and visits to railway installations. This still can be found today with regular meetings and a monthly new letters all full of information related to the area formerly operated by Southern Railways.

Membership is open to any persons aged 14 years or older.

Subscriptions Annually; £10.00, Family (Two or More c/o same address) £15.00

Above: Class 66 733 with 6G60 Ellesmere Port - Ironbridge loaded Biomass passes Upton on May 7th. [Phil Martin](#)

Top Right: An unusual working on May 25th, when 4Z66 Doncaster to Fiddlers Ferry Biomass wagons passes through Pleasington with Class 66 728 in charge. [David Hollowood](#)

Bottom Right: Class 66 727 heads south through Doncaster on April 29th with an MGR working. [John Coleman](#)

Below: Class 66 727 heads through Ince & Elton on May 9th. [Brian Battersby](#)

Class 66 716 brings the 4V94 empty biomass hopper train from the Ironbridge power station to Portbury through the village of Charfield, South Gloucestershire on May 5th. [Gary S. Smith](#)

Above: Class 66 727 'Andrew Scott' is seen outside the GBRf depot at Peterborough. [Richard Hargreaves](#)

Top Right: In preparation for GBRf taking over working the 6K05 turn from EWS/DBS, Class 66 733 approaches Pleasington station with an 0233 route learner from Warrington to Carlisle, May 14th. [Dave Felton](#)

Bottom Right: On May 23rd, Class 66 712 passes through Doncaster with an Immingham - Eggborough MGR working. [Michael Lynam](#)

Below: Class 66 728 stands in Liverpool Bulk Terminal on May 25th with a rake of hoppers, having just arrived from Doncaster. [Michael Lynam](#)

Class 20 901 and 20 905 are seen hauling 'S' stock past the Central Rivers depot on May 6th. HNRC liveried Class 20 311 and 20 314 are on the rear of the train. [Andy](#)

Freightliner's workings

Above: Class 66 544 picks up speed at Farrington with 6M11 Hunterston High Level to Fiddlers Ferry power station heavy haul MGR working on May 11th. [Alan Naylor](#)

Top Left: On May 4th, the 4029 Crewe Basford Hall to Southampton Maritime passes Oxford with Class 66 418 still wearing full DRS livery despite being operated by Freightliner. [Derek Elston](#)

Bottom Left: Another shot of Class 66 418, seen here hauling an intermodal service northwards towards Kentish Town West station on May 19th. [Papercliponnawire](#)

Below: Class 66 599 heads the Roxby - Brindle Heath empty bins through Doncaster, May 24th. [Michael Lynam](#)

Above: Class 86 628 and 86 629 lead the 4M54 Tilbury R.T.C. to Crewe Basford Hall through Stafford on May 1st. [John Martin](#)

Top Left: Class 86 614 working solo is seen at Chelmscote working 4Z51 Tilbury to Daventry intermodal, May 16th. [Derek Elston](#)

Bottom Left: Holding up a Gloucester-bound high speed train, Class 66 552 heads away from Standish Junction with 6Y11 Ashchurch - Fairwater Yard engineering train, formed of HOBC wagons, May 5th. [Gary S. Smith](#)

Below: On May 2nd, Powerhaul liveried Class 66 504 heads the 4O55 Leeds - Southampton through Burton on Trent. [Stuart Hillis](#)

Class 66 503 'The Railway Magazine' and 66 504 pass
Abernethys Crossing, Somerton with 4009 10:28 Trafford
Park - Southampton Maritime, May 1st. [Steve Madden](#)

Above: Heavy Haul's Class 66 520 approaches Cherry Tree (Blackburn) with 4C70 empty coal hoppers from Fiddlers Ferry Power Station to Hunterston on May 25th. [Dave Felton](#)

Top Left: Powerhaul liveried Class 90 045 leads 4M81 Felixtowe North to Crewe Basford Hall through Chelmscote on May 16th. [Derek Elston](#)

Bottom Left: Class 86 609 and 86 605 head the 4L97 Trafford Park to Felixtowe intermodal working through Camden Road Junction on May 19th. [Papercliponawire](#)

Below: Class 66 587 passes Northampton at the head of the 4M94 Felixtowe to Lawley Street, May 23rd. [Derek Elston](#)

Above: Class 66 529 working Rugeley PS to Kellingley Colliery empty coal hoppers passes through Stenson on May 1st. [Stuart Hillis](#)

Top Left: Class 66 502 passes through the heart of Camden Town working 4M20 the Felixstowe to Lawley St. intermodal service on May 19th. This stretch of line from Camden Road to Willesden Junction Low Level via Queens Park is used only for freight workings. [Papercliponawire](#)

Bottom Left: On May 30th, Class 66 413 is seen working the 6D78 Willesden - Bardon Hill quarry with empty stone wagons nearing Moira on the Burton - Leicester freight only branch. [Stuart Hillis](#)

Below: Class 66 544 is seen approaching Cherry Tree (Blackburn) station hauling 6M11 Hunterston to Fiddlers Ferry Power Station with 2000 tonnes of loaded coal hoppers on May 9th. [Dave Felton](#)

Over the weekend of Saturday April 20th and Sunday April 21st, Ryecroft Junction to the Rugeley Trent Valley line was closed for engineering works and coal trains that are normally routed by that branch to the Rugeley power station were diverted. On the Saturday, Class 66 519 crosses over from the Rugeley side of the River Trent to the Colton side with the 4Z56 Rugeley Power Station - Basford Hall empty coal hopper train. This used to be a common route for trains leaving the power station until the West Coast Main Line was rebuilt during the previous decade. On this occasion, a railman in hi-vis clothing walked the line ahead of the train as it was reversing out of the power station. Under the bridge the Trent Valley railway can be glimpsed on the opposite side of the river as that railway bypasses the town. [Gary S. Smith](#)

DCR workings

On Bank Holiday Monday May 6th, Class 31 190 was employed to take a few wagons from Hampshire to Derby. The BR green-liveried type 2 locomotive is seen here taking the 6231 Eastleigh works - Chaddesden sidings through Tilehurst, Berkshire. [Gary S. Smith](#)

Top Right: Running 106 mins late due OHL damage, Class 56 303 leads 86 228 (450 007) and 86 242 (450 008) through a wet and miserable Northampton from Long Marston to Willesden TMD for testing before export to Bulgaria. [Derek Elston](#)

Bottom Right: Class 31 190/D5613 is seen at Keyham, having arrived to collect the 'Railvac' before heading to Eastleigh on May 12th. [Steve Andrews](#)

Below: Class 56 311 heads light engine through Burton on Trent working as 0Z56 Washwood Heath - Derby where it will join up with Class 56 301 and work onward to Crewe, May 31st. [Stuart Hillis](#)

Above: Class 31 190 is seen working the 6Z31 Eastleigh Works - Chaddesden sidings near Wychnor Jct. on May 6th. [Andy](#)

Top Right: Class 56 303 is seen hauling 50 044 as 0Z50 SVR Kidderminster to Brush Loughborough through Burton on Trent, May 15th. [Stuart Hillis](#)

Bottom Right: Class 56 303 is seen working the empty fly ash from Calvert to Didcot power station past Banbury Road Stone Terminal on May 7th. [Steve Madden](#)

Below: Class 31 190 is seen working light engine through Burton on Trent running as 0Z31 Derby to Weymouth Jersey sidings to collect the Swedish Railvac from it's jaunt around the UK, May 30th. [Stuart Hillis](#)

HSTs

Top Left: First Great Western's HST power car No. 43159 leads a west bound service through Southall on May 11th. [Derek Elston](#)

Bottom Left: Grand Central HST power cars Nos. 43468 and 43423 are seen at Doncaster on May 24th with a Sunderland - London Kings Cross service. [Alex Thorkildsen](#)

Below: On May 6th, East Midlands Trains' HST power car No. 43060 heads a London St. Pancras to Nottingham service through Cossington. [Andy](#)

A meeting of First Great Western units at Black Bridge, south of the Standish junction, Gloucestershire on April 11th, as on the left, HST power car No. 43169 has been given priority with the 1G38 Paddington - Cheltenham Spa whilst on the right 150 131 on the 2M98 Southampton Central - Great Malvern has to give way and approaches the junction slowly. The high speed train was of course introduced by British Rail as a diesel multiple unit. [Gary S. Smith](#)

On May 6th, CrossCountry HST power car No. 43378 is seen on the rear of a Plymouth - Glasgow Central service as it passes near Wychnor Jct. [Andy](#)

Class 92s workings

Above: Class 92 002 'H.G. Wells' arrives into Crewe on May 16th with a mixed rake of repaired wagons from Warrington Arpley. [Michael Lynam](#)

Top Right: Class 92 016 leads the 6B41 Wembley to Daventry water train through Northampton on May 23rd. [Derek Elston](#)

Bottom Right: Class 92 012 works an 0Z98 Crewe IEMD to Bescot holding sidings up through Stafford on May 1st. [John Martin](#)

Below: On May 17th, Class 92 041 heads the 4M63 Fridays Only Mossend - Hams Hall intermodal service through Acton Bridge. [Michael Lynam](#)

Class 92 037 passes through Euxton with 6S94 the 03:05 China Clay tanks from Dollands Moor to Irvine Caledonian Paper on May 29th. [Dave Felton](#)

Units, Units, Units

Top Right: On May 18th, under a stormy sky, First Capital Connect Class 365 520 is seen arriving into Peterborough with a terminating service from London Kings Cross. [Class47](#)

Bottom Right: Arriva Trains Wales liveried Class 150 213 passes Waverton on May 11th working the Chester - Crewe shuttle. [Brian Battersby](#)

Below: On May 12th, Virgin Trains' Class 221 Super Voyagers Nos. 221 109 and 221 113 pass Bolton Junction on the approach to Blackburn station with 1S35, the diverted 09:20 service from Birmingham New Street to Glasgow Central via the Settle and Carlisle line due to the West Coast Main Line being closed at Lancaster. [Dave Felton](#)

Above: Seen arriving into Sheffield from Doncaster on May 25th is Northern's Class 142 064. [Paul Godding](#)

Top Left: Northern Rail's Class 156 424 is seen at Helsby on May 11th with a service from Liverpool, (or should it be *THE* service from Liverpool). [Brian Battersby](#)

Bottom Left: Arriva Trains Wales' Class 175 001 arrives into Shrewsbury on May 11th working a Cardiff - Manchester service. [Richard Hargreaves](#)

Below: Greater Anglia's Class 315 816 is seen at Upminster station with the Romford shuttle on April 18th. [John Coleman](#)

Above: London Midland's Class 170 634 is seen passing Malvern Common on May 26th with the driver giving your photographer a funny look whilst working a Hereford to Birmingham service. [Neil Pugh](#)

By RAIL, SEA and ROAD

A pictorial record of the mammoth task of repatriating two A4 steam locomotives after 50 years in North America

A joint project by the NRM and MOVERIGHT INTERNATIONAL

By RAIL, SEA and ROAD

A pictorial record of the mammoth task of repatriating two A4 steam locomotives after 50 years in North America

Due to the immense amount of interest that the re-patriation of "DDE" and "DoC" generated over the last few months, we have now decided to share all the photos from the work with you all in the form of this 100-page photobook.

Being available direct from the publishers 'Blurb', this allows people from all over the world to order their own copy of the book and have it delivered direct to them in the choice of softback, hardback with dust jacket or hard-back image-wrapped.

Please take a minute to look at our publication "By RAIL, SEA and ROAD" and we hope you enjoy the images of this, one of the most ambitious projects undertaken for the benefit of railway history in the UK.

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

London Overground saturday peak?

Q: A friend and I were travelling around London on a Saturday a few weeks back, to see the steam on the Met. We'd bought Off-peak travelcards. A member of London Overground barrier staff (I can't remember which station it was now) tried to tell us that they are not valid before 0930, even on a Saturday (the barriers would not let us through)! Since it was almost 0930 at the time he let us through anyway, but we both have a suspicion that he was talking rubbish. Was he?

A: *Travelcards are valid as follows:*

• *Anytime Day Travelcard which can be used for travel at any time on the day of validity and for travel for any journey starting before 0430 the following day.*

• *Off Peak Day Travelcard which can be used on the day of validity from 0930 Monday to Friday, all day Saturday, Sunday and on public holidays. It is also valid for use for any journey starting before 0430 the following day.*

• *7 Day Travelcard which can be used at any time during the 7 day period of validity and for any journey starting before 0430 the day after the expiry date. Assuming Chapel is in the ranger validity area, then perfectly valid. Unlimited travel within the validity area subject to any time restrictions.*

So Yes he was completely wrong!

Coach * Seat *** reservation with non-Advance ticket

Q: Booked an off peak return from Birmingham to Haywards Heath route High Wycombe with East Midlands Trains website today and collected it from a TVM, noticed I had a seat reservation marked coach * seat ***, which I'm used to getting with some advances, but never got it with any other ticket before. The website did ask me if I wanted to reserve a seat but never confirmed I had reserved one, though it was a bit unusual and pointless to get a */*** reservation with my ticket today!

A: *It is a train reservation ticket, only given out for TOCs that don't do specific seat reservations (Southern, Chiltern, Southeastern etc).*

If booked online you normally have to select an outward journey to select the ticket, that means the reservation ticket you got is telling you which train to catch as it's the one you've chosen.

North Wales Rover

Q: According to the leaflet, this can be bought at staffed stations and on buses. Recently, I attempted to buy one for Zones W and D at Chester Station. Apparently not available because "Zone D has no trains (from Ruabon)"! I then attempted to buy it on the Chester - Wrexham bus. Not available because "We only sell Arriva tickets".

A: *I am sorry to hear that someone else has experienced problems purchasing/using this ticket. The last time I bought one of these tickets, I purchased the ticket at Chester railway station, then decided to start off by using the Arrive route 1 bus to Wrexham which starts outside the station. Four successive bus drivers refused to accept the ticket for various reasons & one of these was less than polite about it as well. I returned to the ticket office at the station (also run by Arriva) to*

explain the situation & the staff were perplexed as to why the bus company wouldn't accept the tickets. I did end up using the ticket, (by rail only) but have not purchased one since due to the difficulties I encountered.

I complained to Arriva and their initial response was to thank me for bringing the matter to their attention & that the Wrexham depot had not been told about the existence of the ticket! They also told me that I was dealing with two separate companies, which may technically be correct, but the trains & buses are both painted turquoise & have the same name emblazoned on them...!! Given that the product is sponsored in part by Arriva, I found this a little difficult to believe. No offer of compensation made either despite the fact I was made to look like an idiot by the company.

A second, more blunt letter pointing out that Arriva actually ran both the buses & the trains expressing my opinions about their inability to manage such products across their business did elicit a refund. However, Arriva have lost my business from this market & the OP's story doesn't bode well for the future of the rover if Arriva can't be bothered to market the darned thing properly & ensure ALL their depots are aware of the existence of the ticket.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! see you there.

Deltic '22 is seen heading through Kilmarnock on May 25th with a Kilmarnock to Yoker move. [Darrel Hendrie](#)

Further access improvements planned for Waverley

Vehicle access ramps will close temporarily during this summer as part of wider improvements to access arrangements at Edinburgh Waverley Station. The south ramp, which is used for taxi and drop-off access, will close for three weeks from June 3 to allow for new security measures to be installed.

The security measures, to be implemented in September this year, will see drop-off traffic moved to New Street car park and taxi numbers controlled by a secure entry arrangement. The new measures will improve security, enhance safe movement through the station and result in a better station environment for passengers and staff. The ramp access changes are being implemented to coincide with further access changes to improve passenger movement around the station. By summer, a new lift connecting the Waverley Steps mezzanine level to the station concourse will be operational, while new escalators connecting the Market Street walkway to platform 11 will be installed by September.

Further improvements to the Calton Road entrance will be made by December 2013, with new lifts permitting step free access to the eastern end of the station for the first time. David Simpson, Network Rail route managing director for Scotland, said: "Waverley is now easier to access than at any other time in its history and these additional improvements will further enhance access, movement around the station and the station environment.

"Restricting vehicle access to Waverley will improve security, reduce the risk of accidents, enhance the environment for passengers and decrease the level of air pollutants in the station. A certain number of taxis and mobility vehicles will still be able to access the station but, from September, drop-off traffic will be asked to use New Street car park, where we have allowed 30 minutes free parking."

The latest access improvements follow three years of enhancement work at Waverley. The renewal of the station roof was completed in 2012. Lifts and escalators were also opened at the north side in 2012, allowing access to Princes Street. To the south of the station, lifts now connect the station to Market Street and New Street car park.

During the three week closure in June 2013, taxis servicing the station will pick up and drop off on Market Street.

Carmarthenshire railway station restoration needs your help

Network Rail is calling on the local community to help them to restore Pantyffynnon railway station in Carmarthenshire. Believed to date from 1857 and built to an Isambard Kingdom Brunel chalet design, the station lies on the Heart of Wales Line at its junction with the branch lines to Brynamman and Abernant.

The hope is to restore the Grade 2 listed former station building at Pantyffynnon station over the next year with funding from Network Rail and the Railway Heritage Trust.

However, the project team in charge of restoring one of the few examples of this design back to its former glory need the support of the local community to pinpoint the finer detailing of the building in times gone by. They are particularly interested in any photographs of the north end of the building, as that would assist in determining the original form.

Network Rail's director of route asset management for Wales, Jonathan Pegg, said: "This is a magnificent building which will be brought back into use as a result of our renovation. However, we simply do not have the historical information on its design as some records have been lost over the passage of time.

"We are appealing to any former railway workers, local historians, rail users or enthusiasts to provide any old photographs, engravings or records of the building. We need them to help piece together the history of this unique building so that we can faithfully restore this important local building.

"Items dating from its early life between 1860 and 1920 are of particular interest to the project, but any information that the community can give will be gratefully received." Any information should be sent to Adam Checkley, Network Rail, 5 Callaghan Square, Cardiff, South Glamorgan, CF10 5BT, or email Adam.Checkley@networkrail.co.uk. Any documents sent to Network Rail will be returned to its owner by recorded delivery within 14 days of receipt.

Amphibious antics at Norton Bridge

Work is well underway to re-home the newts of Norton Bridge as part of a major project to deliver performance improvements on the West Coast Main Line through Staffordshire.

The newt relocation comes in advance of the proposed railway flyover at Norton Bridge which will remove a major bottleneck on the route and forms part of a series of preparatory pipeline diversions, scheduled to take place from July of this year through to early 2014.

Also included in these works is the establishment of a compound off land between Station Road and Scamnell Lane, with the installation of a new road junction and supporting traffic management taking place at the beginning of June.

Leading the project on behalf of rail infrastructure owner and operator Network Rail is the Staffordshire Alliance – a partnership of Atkins, Laing O'Rourke, Network Rail and VolkerRail, working as part of a new collaborative contract that is helping to transform the delivery of rail projects in the UK.

Dominic Baldwin, alliance manager, said: "Whilst construction of the flyover itself is subject to a development consent order, there is a host of enabling works we need to complete first that will help in the efficient and effective delivery of the project, whilst also managing the impact on the local environment. This includes the relocation of protected species."

In the Shallowford area of Norton Bridge this includes great crested newts, with a dedicated reserve being created for them at Shallowford House Retreat and Conference Centre. Currently under construction, the reserve will feature six ponds, new landscaping and specially constructed walkways, with the newts being relocated there starting this autumn.

In the meantime, special fencing has been erected around the alignment of the pipeline diversions at Norton Bridge to help safely capture the newts, which are temporarily transferred to a holding pond (also located at Shallowford House), before moving to their new home later in the year.

Loco Fleet List 2013

This 82 page publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

Contents

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric Locomotives
- Eurotunnel Locomotives
- Unclassified & Prototype Locos
- Locomotive Names

Loco Fleet List 2013 is available via mail order for just £7.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or by using Paypal when visiting the Milz Publications website.

Update on rail repair – Hatfield & Stainforth

Engineers have this now started to remove spoil from the rail line damaged by a spoil heap slip at Hatfield colliery in February. Extensive, careful removal of material from the rest of the spoil heap means that it is now stable enough for engineers to work safely on the spoil which is on the rail bed.

Phil Verster, Route Managing Director for Network Rail, said: “I want to thank passengers for their patience during this exceptionally difficult time. The size of the task facing us at Hatfield Colliery is one of the most complex I have faced in my rail career. Engineers have made excellent progress on site but the potentially dangerous nature of the material we are dealing with means repair has to be carefully and meticulously planned. “The recent good weather means we have increased confidence that the railway will be restored in July. However that remains subject to weather conditions on site and the behaviour of the spoil, which can be unpredictable. Therefore we continue to aim for July but plan for a September restoration to make sure we have a clear, workable train plan should the works coincide with the resignalling programme at Nottingham, starting 20 July.”

On continuing disruption to rail passengers in north Lincolnshire, Mr Verster added: “I fully appreciate the importance of restoring a direct rail service to communities and businesses in Cleethorpes, Scunthorpe, Goole and other places affected by the Hatfield landslip. My team and I are committed to do so as quickly as is possible. “We are working closely with the operators of passenger and freight traffic to make best use of the railway network during the disruption and there have been some difficult trade offs. Capacity on the diversionary routes through Brigg and Lincoln is limited and it is essential we provide capacity for the freight flows out of Immingham and Scunthorpe upon which our economy relies. I remain grateful for the patience of our communities, our passengers and our freight customers.”

Network Rail has to find diversionary capability for approximately 140 freight services per day because of the damage caused by the landslip. These trains are essential to the UK economy and carry, amongst other goods, oil for aviation fuel, steel critical for production processes and coal for electricity generation. The majority are being accommodated on the Brigg line with some services also accommodated on the route through Lincoln. A significant number of these services are carrying coal which is feeding the power stations – maintaining essential power supplies to the north of England and East Midlands.

Following meetings with local councils and customer feedback, First TransPennine Express will be introducing a new Sheffield to Cleethorpes service via the Brigg Line. This new ‘holidaymaker’ will run on Saturdays from 25 May leaving Sheffield at 1030. It will return from Cleethorpes to Sheffield at 1811. This is in addition to the three services in each direction which are operated by Northern Rail on this route every Saturday.

The numbers are up at Finsbury Park station

Platform numbers have changed at First Capital Connect's station Finsbury Park to make space for a new rail line that will open in December and improve rail services.

From Sunday, 19 May, trains have departed from the same platform as before but the platform will have a new number.

Each platform number will be increased by the value of two so that platform 1 will become 3, platform 2 will become 4 and so on.

Karen Sherwin, station manager for First Capital Connect, said: "Our passengers' trains will leave from exactly the same place as before but the platform they use will have a new number. We will be handing out leaflets and using posters, Twitter and public address announcements to

help spread the message."

Network Rail are making the changes to create space for two new platforms and a new passenger line, which will open in December 2013 to ease congestion on the rail network and improve the reliability of train services.

In the longer term, as more trains are made available through the Thameslink Programme, the extra passenger line will make space for more services across all lines on the Great Northern route and provide a link from Finsbury Park to the Thameslink route with direct trains across the capital to London Bridge and beyond.

Customers are urged to see www.firstcapitalconnect.co.uk/stations for more information.

Consultation opens on proposed routes for Crossrail 2

With London's population set to boom, plans are underway for a vital new rail line, Crossrail 2, in order to support this future growth. Now the plans moved a step closer with Transport for London (TfL) and Network Rail launching a public consultation on the proposed routes. With Crossrail already set to provide a 10 per cent increase to rail capacity in London, Crossrail 2 would add to this even further. It would create a new high frequency, high capacity rail line with shorter journey times between south west and north east London. It would help to relieve congestion on busy main line routes into central London and on the Underground network, while allowing communities around London to benefit from the creation of new jobs and new homes.

The Mayor of London, Boris Johnson said: "Crossrail is set to revolutionise travel in the capital, and with a predicted 10 million people expected to be living in London by 2031, pressing ahead with the next stage of the plan, Crossrail 2, is quite simply essential. In order to support this great capital's bright future, we need to think ahead and not wait until our transport arteries are clogged up and restricting jobs and growth. That's why I am sending out a rallying cry for the public's support for this consultation – come and share your views so we can progress with Crossrail 2 as soon as possible."

The consultation will seek the views of people in London and the south east of England and runs from 14 May to 2 August 2013. It aims to establish what level of support there is for the project and where the public and stakeholders would like Crossrail 2 to serve. The public are encouraged to respond and share their views at www.crossrail2.co.uk. Even with the Tube upgrade works and the delivery of Crossrail additional capacity on the transport network is needed to cope with London's forecasted population growth. Crossrail 2 could be operational in 2030 but it is essential that work continues now to meet this target so the future forecasted population and employment growth in London is supported by new transport infrastructure.

A route for Crossrail 2, formerly known as the Chelsea-Hackney Line, has been kept free from any intrusive building development since 1991 and any new buildings along the route have been constructed to allow for a potential new railway line. TfL is now reviewing this safeguarded route and has proposed two alternatives which would better meet the rail needs of the capital in the future - a Metro option and a Regional option.

The Metro option could offer a high frequency underground service across central London. This option could be an underground railway and could operate between Wimbledon and Alexandra Palace. The route would relieve congestion on trains and platforms on the Northern, Piccadilly and Victoria lines. The Regional option could benefit people in Hertfordshire, Surrey and beyond by enabling more trains to run on busy National Rail routes. This route could be a combined underground and overground railway and could operate from Alexandra Palace and stations in Hertfordshire to various locations in south west London and Surrey. Transport for London's Commissioner, Sir Peter Hendy CBE said: "It is vital for the UK economy that we get on and finish Crossrail and the upgrade of the Tube. It is equally important for us to look beyond that if we are to accommodate a population forecast to grow to 10 million by the early 2030s. Given the lead times needed, that means progressing with Crossrail 2 now as an essential element in maintaining London's status as a world city." David Higgins, Network Rail chief executive, said: "London's railways are already the busiest and most congested in the country, with many main lines already operating at, or close to, capacity. With the number of rail passengers in London predicted to grow by 30 per cent in the next twenty years, our plans to increase capacity through projects like Thameslink and Crossrail will make a real difference. But we must also press on with schemes such as Crossrail 2 to make sure public transport continues to support and drive economic growth in and around the capital."

Lord Adonis, Chairman of the Crossrail 2 Task Force for London First, said: "Even with the significant investment already taking place in transport infrastructure, Crossrail 2 will be as essential as Crossrail for London to provide jobs and prosperity in the next generation. I am glad to see the Mayor taking forward preparations for Crossrail 2. Now we need a credible funding plan embracing the public and private sectors, with a view to construction in the 2020s." Baroness Jo Valentine, Chief Executive of London First said: "We welcome the start of the consultation process for Crossrail 2 today which is a key piece of infrastructure needed for London. Even with the major transport programmes that are already planned or underway, by the late 2020s most tube and train carriages will feel like sardine tins for much of the day. That's bad for London of course, but as the capital is the engine room of the UK economy, it would be damaging to the country as a whole. We need everyone to get behind this project and make it happen."

A report on the findings of this consultation will be presented to the Mayor of London in autumn this year and made publicly available on the consultation website. Further, more detailed consultations would then follow.

S&DJR Jinty No. 23 is seen arriving at Swanwick on May 4th. [John Martin](#)

Poster girl Hannah helps to keep Hove station litter free

Hove student, Hannah Benn has won a Southern competition to design a poster aimed at getting people to bin their rubbish, rather than leave litter at Hove station.

The competition was the idea of Hove MP, Mike Weatherley who asked Southern to contact local schools and invite pupils to create a poster using the theme 'be considerate to other passengers - bin your rubbish'.

Hannah's winning design really caught the judges' imagination and the poster, with its vibrant colours and very clear message should make people think twice before they decide to throw their rubbish on the ground or onto the track.

Hannah's poster will be displayed throughout the station and for her efforts, she wins vouchers for a local Art shop, Lawrence, in Portland Road Hove.

Work starts to refurbish historic Frome railway station

Work has started on a £500,000 project to refurbish and repair the Grade II listed railway station at Frome in Somerset. Improvements to the 163-year-old station will include timber repairs and strengthening, masonry and glazing repairs, cleaning and redecoration, the removal of vegetation and alterations to guttering.

Network Rail will also replace the electrical wiring and lighting in the station buildings and platforms to meet the latest standards, making sure the historic station is fit for the future.

The original train shed at the station remains almost entirely intact and is probably the last of its type still in use in the Western region. Over the past 163 years, its condition has deteriorated and it now needs extensive refurbishment and repairs to restore it to its former glory.

Robin Basu, Network Rail's community relations manager for the Western route, said: "The railway station at Frome is an exceptionally important example of its period and type still in use on Britain's rail network.

"It has become a major landmark in Frome and is a dominating piece of historic railway architecture of national importance. But it now needs additional strengthening and repair works to allow it to comply with the modern structural standards and requirements for stations and to protect it from further deterioration."

The station was built by the Wilts, Somerset and Weymouth Railway, a railway that linked the Great Western Railway (GWR) at Chippenham with Weymouth.

The line was authorised in 1845, was acquired by the GWR in 1850, reached Frome in the same year, and was completed throughout in 1857. This line forms the basis for today's Bristol to Weymouth route and is now managed by train operator, First Great Western.

Refurbishment work began in April 2013 and will take 14 weeks to complete. Network Rail continues to work closely with the Friends of Frome Station and the local community during the works in order to maintain and build relationships within the community.

Virgin Trains boosts Scotland - Birmingham services with December timetable

An overhaul of Virgin Trains' timetable this December will deliver an extra 3,300 seats per day between Scotland and Birmingham and offer fresh competition to airlines operating on the route. The planned reconfiguration of services will deliver the first frequent direct trains from Scotland to Birmingham Airport in six years. Twenty-four of the 28 Scottish services that currently start or terminate in Birmingham will be extended to London Euston, offering new direct rail services to Scotland from Coventry, Milton Keynes and Sandwell & Dudley. This will give holidaymakers better options for travelling to Birmingham, Glasgow and Edinburgh airports to get cheaper flights during Scottish or English school holidays.

The changes will see five-car diesel Super Voyager trains that connect Glasgow and Edinburgh to the UK's second-biggest city largely replaced by either double Voyagers (10-cars) or nine- or 11-car electric Pendolinos. It represents an 80% increase in seating capacity compared to 2008, when the current Virgin High Frequency timetable was introduced. Some 12,967 seats will be available on weekdays, up from 9,656 today. Scotland's Transport Minister, Keith Brown, welcomed the increase in services, saying: "The Scottish Government is determined to deliver a rail network that brings together communities and cities, connecting people to jobs and developing social and economic opportunities for all in Scotland. Cross-border services will help support that ambition and we very much welcome the recognition by Virgin Trains of the increasing demands on services between Scotland and Birmingham and the additional capacity the extra 3,300 seats on these services every day will bring."

Neil Rami, Chief Executive of Marketing Birmingham, said: "The news that Virgin Trains is expanding its capacity and services into Birmingham will provide a significant boost for the local economy, by helping to bring new visitors and investors to the city. Tourists and businesses alike need to reach locations as quickly and easily as possible – and an increase in rail services to Birmingham will provide another reason for them to come here. "Birmingham's transport infrastructure is expanding rapidly, with Virgin Trains' passengers set to benefit from the redevelopment of New Street station and Birmingham Airport's runway extension, which will open up direct routes into markets such as China and the West Coast of the USA. Birmingham attracted a high of 33.8 million visitors in 2012, and increased demand for services into the city should help to build on this success."

The latest timetable changes follows phenomenal growth in passenger numbers on Virgin Trains' Anglo-Scottish services since it took over the West Coast passenger franchise in 1997 and marks the first step-change in capacity since the company was awarded a temporary franchise in December 2012. Virgin Trains is now expected to continue running the West Coast passenger service until April 2017. Between 2008 and 2013, passenger numbers travelling on Virgin Trains' services between Birmingham and Edinburgh have grown by 235%. Between Glasgow and Birmingham, growth has been 261%. Meanwhile, Glasgow-Euston, the mainstay of Virgin Trains' Anglo-Scottish operations, has seen growth of 144% over the same period. The overall level of seats available on Virgin Trains' Anglo-Scottish services will go from 17,000 in December 2008 to 30,000 in December 2013.

Chris Gibb, Virgin Trains' Chief Operating Officer, said: "Our plans for December represent the latest phase in our development of services on the West Coast mainline, as we strive to make the most of this iconic route by providing more trains and more seats, seven days a week. The success of recent years shows the enduring popularity of the route, and the potential that remains. "We face intense competition from airlines, motorways and other train companies, and will continue to drive forward improvements to attract more customers and stay ahead of our competitors, as well as playing a key part in the economic and social development of the Midlands, North West England and Scotland". The planned timetable change has been welcomed by business leaders in Edinburgh and Glasgow. David Birrell, Chief Executive of Edinburgh Chamber of Commerce, said: "We are delighted that Virgin Trains is adding this capacity on its Edinburgh to Birmingham routes, these additional seats will hopefully stimulate the business and employment opportunities as well as supporting Edinburgh's already strong tourism offer."

Stuart Patrick, chief executive of Glasgow Chamber of Commerce, said: "This is an extremely positive step by Virgin Trains and one which we firmly endorse. Increasing the capacity from Glasgow to the United Kingdom's second biggest city will certainly be of interest to the city's business community, while leisure customers visiting Glasgow will also benefit from the additional seats. It once again reaffirms Virgin's commitment to Glasgow, the latest in a long line of positive initiatives. Additionally, it's extremely promising to see the company focusing on its network right across the UK, ensuring connectivity is enhanced on many different key routes."

The December timetable is the latest step change in improvements to Anglo-Scots services by Virgin Trains. In 2004, the company introduced its tilting electric Pendolino and diesel Super Voyagers trains, revolutionising travel on the West Coast mainline and cutting the fastest Glasgow Central to Euston journey from 5 hours 13 minutes to 4 hours 41 minutes. The Scotland-Birmingham service was developed as part of the Virgin Cross Country franchise before transferring to West Coast in 2007.

Scottish Government funds wi-fi for ScotRail stations and trains

Free wi-fi will be rolled out at 25 ScotRail stations across the country, ScotRail and Transport Scotland has revealed all 38 of ScotRail's Class 380 trains will have wi-fi by March 2014, with trains being fitted at a rate of six or seven a month from October this year thanks to more than £1million of Scottish Government funding.

These trains – the newest in the ScotRail fleet – are used on routes linking Glasgow Central with Ayrshire, Inverclyde and Renfrewshire, as well as Edinburgh-North Berwick/Dunbar.

The expansion of wi-fi represents the latest phase in the Scottish Government's long-term ambition to provide wi-fi right across Scotland's railways.

Transport Minister Keith Brown said: "We are committed to ensuring that rail travel across Scotland is an attractive option for tourists, commuters and business users. Giving passengers the ability to connect to the internet at 25 stations and on all class 380 trains throughout Ayrshire, Inverclyde, Lanarkshire and the Lothians will provide more opportunities for people to switch to the rail network whilst keeping up-to-date with the latest information.

"In 2014, the eyes of the world will be on Scotland and we have a once-in-a-lifetime opportunity to showcase what we have to offer as a modern country. I am pleased that in advance of the major events taking place in 2014, visitors flying into Prestwick and Glasgow International airports, who then join the rail network, will be able to get access to wi-fi on every train. Combined with the station enhancements, this will help keep Scotland's railways at the forefront of wi-fi installation. We will continue to explore ways of getting more people connected when travelling by train between all seven Scottish cities."

Steve Montgomery, ScotRail managing director, said: "It is exciting that people will be able to enjoy free wi-fi at ScotRail stations for the first time, as well as on board our largest fleet of electric trains.

"We are confident that the expansion of wi-fi will be warmly welcomed by our customers, who increasingly want to stay connected during their journeys, whether for business or to chat with friends."

The Scottish Government has provided £250,000 to help install wi-fi by December 2013 at Aberdeen, Anniesland, Ayr, Dalarnock, Dundee, Dunfermline Town, Edinburgh Haymarket, Edinburgh Park, Exhibition Centre, Falkirk High, Fort William, Glasgow Central, Glasgow Queen Street, Helensburgh Central, Inverness, Kilmarnock, Kirkcaldy, Linlithgow, Mount Florida, Paisley Gilmour Street, Partick, Perth, Stirling and Wemyss Bay stations.

Wi-fi will be installed at Gleneagles station as part of its refurbishment in time for next year's Ryder Cup.

Mr Montgomery said: "We considered several factors when selecting stations to receive wi-fi, including footfall, how long people stay in the station, number of services and the impact of major events, such as the Commonwealth Games and Ryder Cup. We have longer term plans for further stations to receive wi-fi in future."

Fitting of wi-fi to Class 380s will take place at Shields Depot in Glasgow during routine weekend maintenance between October 2013 and March 2014, avoiding any impact upon customers.

Liz Cameron, Chief Executive of Scottish Chambers of Commerce, said: "This is great news and a first-class project from both the Scottish Government and ScotRail.

"The ability for businesses to remain connected whilst travelling will enable us to be more productive and makes best use of our time. There is no doubt this will encourage more people to travel by rail."

The expansion builds upon the ongoing installation of wi-fi on all 59 of ScotRail's Class 170 express trains.

ScotRail's free wi-fi service allows access to email, web browsing and social media sites such as Facebook and Twitter.

First Hull Trains makes Oyster Cards available on board

First Hull Trains has launched a new service which allows commuters to buy pre-paid Oyster Cards on board its 90 services a week to the capital. Commuters using Hull Trains services from Hull, Brough, Howden, Selby, Doncaster, Retford and Grantham can now buy the cards from the buffet carriage on board.

David Pritchard, First Hull Trains' Revenue Development Manager, said: "We are continually looking at how we can make the whole journey experience more convenient for our customers. This includes investigating opportunities to join up with other transport providers. "This is something which customers have been asking for, once again demonstrating our adaptability in providing the service people ask for.

"The Oyster Cards are pre-loaded with £15 of credit, and are available to buy on all First Hull Trains services. They provide a stress-free solution for those customers who need to use the Underground, London buses and much more after they leave our train at Kings Cross. "They can even be used on certain boat services on the river, and to take a flight on the Emirates Air Line across the Thames. And what's more, you won't need to queue at the ticket office for them when you get to London." The cards enable the user to simply "touch in" at the ticket gates when entering the Underground or National Rail stations, or when boarding a bus. They can be simply re-charged at a ticket office, online or at credit card terminals when the £15 credit runs out, and used time and time again. The credit does not expire over time and fares are substantially cheaper using an Oyster Card than paying in cash as you go. This step forward in integration of transport comes after a £4.5m mechanical and electrical fleet overhaul and £2.4m internal refresh of the organisation's four trains, which now offer high quality Wi-Fi throughout, free to use for all passengers, and plug sockets available in all seating sections. The company has also been driving value for money with lower prices and offering customers more flexible ticketing options. Regular business customers can take advantage of 'Flexi-tickets' and by booking in advance, leisure travellers can get to the capital for as little as £10 – that's less than five pence a mile from Hull.

First class travellers can also enjoy some of the best value tickets anywhere on the East Coast Main Line, with outstanding customer care and complimentary food and drink. Mr Pritchard said: "We are always looking at ways to make travelling with First Hull Trains as easy and hassle-free as possible for the 800,000 people we transport every year. "People can now print their tickets at home, get their tickets direct to their smartphones and tablet computers, and now pick-up Oyster Cards."

This latest initiative comes after passenger numbers have increased by around 20 per cent in 2013 and First Hull Trains was one of the only train operating companies in the UK to keep its average 2013 fare increase below inflation.

Great Western Railway clock is lovingly restored

A 19th century Great Western Railway clock has been lovingly restored to its former glory by Network Rail after it stopped working two years ago.

The GWR clock, which dates back to 1852, is a double-aspect clock and keeps time at the historic Severn Bridge Junction signal box in Shrewsbury – the largest mechanical signal box in the world.

The signal box, which opened in 1904, and its internal fitments are Grade 2 listed and it operates 24 hours a day, every day of the year. It houses 180 levers controlling track signals and points – of which 90 are still in use.

The clock would have been produced for a large signal box with a minimum of two signallers, one at each end of the frame – the method of operation in use today at Severn Bridge Junction.

Mark Langman, Network Rail’s Wales route managing director, said: “The clock was originally built by the Great Western Railway at its famous Swindon works and first used in the Oxford area – though we can’t be sure at which signal box.

“It had been keeping time at Severn Bridge Junction signal box for many years until it stopped ticking two years ago and was put into safe storage.

“We sourced a local expert in Adrian Donnelly, a Shrewsbury-based clock and barometer specialist, who has done a wonderful job restoring the clock back to its best.

“Adrian enthused on the quality of the mechanism and has accurately dated its manufacture back to 1852. By completing this important restoration, another piece of railway heritage has been preserved for future generations.”

On May 29th, Class 950 001 heads up the bank approaching Pleasington on a survey of tracks from Carnforth and back. [Michael Lynam](#)

New footbridge to be built in Fishbourne

Work has started on a new footbridge which will replace a high-risk footpath level crossing in Sussex.

The new bridge in Fishbourne will link Fishbourne Road East and Westgate and is part of Network Rail’s ongoing work to improve safety at level crossings.

In recent years there have been a number of incidents at the crossing including three fatalities, 22 near misses with trains, nine reports of misuse and 18 acts of vandalism.

The footbridge will provide step-free access across the railway and be built on the site of the existing crossing.

Tim Robinson, Network Rail’s route managing director for Sussex, said: “Network Rail is committed to improving safety when crossing the railway and will close level crossings and replace them with bridges where ever possible. This crossing has a history of incidents and misuse. We have worked with the local authority and engaged with local people to close it and the new bridge will make crossing the railway in Fishbourne safer for thousands of people every year.”

The main section of the bridge will be enclosed to prevent neighbouring residential properties being overlooked and to minimise the risk of vandalism.

Work started at the end of April and the bridge is due to open in August 2013. The majority of the work will take place during the day but there will be some unavoidable work which will have to take place over night when trains are not running. Local residents will be written to in advance to give warning of the possible disruption.

On May 9th, Class 56 301 worked light engine to Kingsbury to collect Fertis liveried 56 106, 56 031 and 56 069 and deliver them to Nemesis Rail depot Burton, running as 0257 the convoy is seen here arriving outside the depot. [Stuart Hillis](#)

Ticket to ride - Glastonbury founder buys ticket machine

Striking a chord with the local community, Glastonbury Festivals founder Michael Eavis has partnered with First Great Western to provide a new ticket vending machine at Castle Cary Station.

Helping you to get to Glastonbury, First Great Western will run over 50 additional trains to and from Castle Cary Station during the festival. Added to the regular hourly service from London Paddington, these trains will provide almost 13,000 extra seats.

First Great Western are delighted that Michael marked the installation of the new ticket facility. Welcoming the festival founder and philanthropist, FGW's Castle Cary Station Manager Nicholas Reid said: "FGW are continually looking at ways to improve our stations and improve access to the full range of services that we can offer.

"In the last year over £85 million has been invested across our network of 210 stations, by working with rail industry partners, the DfT, and local authorities.

"The work we mark today will allow even more Castle Cary residents to use the station, whether you wish to go down by the seaside or just have the hots for nowhere - helping us to keep people moving in these congested times."

First major changes for passengers as London Bridge redevelopment gathers pace

The first major phase of the redevelopment of London Bridge station began in late May when three platforms were taken out of use until spring 2014. Over the late May bank holiday platforms 8-16, which are used by Southern services, were closed to prepare the area for work on platforms 14-16.

From Tuesday 28 May until spring 2014, platforms 14, 15 and 16 will remain closed while they are redeveloped and platform 13 will be narrowed. There will be no access to the footbridge from platform 13. The changes are a vital part of Network Rail's plans to alter the number of terminating and through platforms at London Bridge to provide more capacity to, from and through the station. Currently there are six through and nine terminating platforms; by 2018 there will be nine through and six terminating platforms. As well as providing greater capacity, it will also reduce the number of trains having to wait outside the station for the next available platform.

To inform passengers of the changes, an exhibition was held at London Bridge station and staff were on hand to answer questions about the project.

Robin Gisby, Network Rail's managing director of network operations, said: "We're transforming one of London's busiest stations. While we work, London Bridge will remain open for the thousands of people who use it every day and we are working closely with the train operating companies which serve London Bridge to keep passengers informed. "Once complete London Bridge will unlock the full benefits of the Thameslink programme and increase capacity through central London."

In a joint statement, train operators First Capital Connect, Southeastern and Southern commented: "We are working together, and with Network Rail, so passengers are kept informed of the work at London Bridge station. "We will ensure our customers are aware of the changes that affect them and what the various journey options are.

"Our station exhibition is just one example of how we are talking with our customers. We've created a programme website, ThameslinkProgramme.co.uk where customers can keep up to date with the Thameslink programme and sign up for email alerts about changes that matter to them."

As a result of closure of platforms 14, 15 & 16, and to coincide with Southern's timetable change, there will be platform alterations to many Southern services and some will be retimed from 19 May onwards. One Southern morning peak service will be diverted to London Victoria from 20 May onwards and passengers are advised to check train times and platforms carefully before travelling.

The route through to platforms 1 to 6 will also change from Saturday 25 May as the entrance by the interim ticket office leading to access ramps closes until early 2014. This change will extend journeys between the interim ticket office and platforms 1-6. Passengers will be informed in advance and the new route will be clearly signposted. Network Rail will carry out the work to the station and track in distinct phases, each having a different impact on train services. This means a number of shorter periods of disruption rather than all passengers being impacted for the full duration of the project.

When the station redevelopment is fully complete in 2018, London Bridge will benefit from increased numbers of services with train services between 8am and 9am increasing from 70 to a maximum of 88.

London Bridge will have the biggest station concourse in the UK and will be fully accessible with lifts or escalators taking passengers to every platform. The lighter and brighter station will have new entrances on Tooley Street and St Thomas Street with improved access to local cycling, walking and bus routes.

The Nosh Report

Welcome to another “Nosh Report”, remember that this is your chance to let everyone know where to go for something to eat or drink, (eg: cafe, takeaway, sandwich shop) when out and about. It can also be about whilst you are on a raitour or sampling the delights of on train catering.

This month I’m handing over to another excellent review by Colin Irwin who has been to the Rose of Lancaster, which just to confuse matters isn’t in Lancaster but is near Mill Hill station.

Their address is :

Rose of Lancaster
7 Haigh Lane
Chadderton
Oldham OL1 2TQ

They are open :

Monday to Thursday : 11.30am – 11.00pm
Friday & Saturday : 11.30am – 11.30pm
Sunday : Noon – 11.00pm

and food is available from:

Monday to Saturday : Noon – 9.15pm
Sunday : Noon – 8.45pm

Anyway, Colin writes

Located next to Mill Hill station on the Manchester to Rochdale line, the Rose of Lancaster “Chadderton’s finest pub & restaurant” provides a typical selection of wines and spirits, as well as several real ales that change fairly regularly, situated overlooking the Rochdale canal and open countryside, they pride

themselves on being at the heart of JW Lees brewing country.

Their food is generous in quantity and very reasonably priced, staff are cheerful and happy to help. The building has recently has a complete refurbishment, so it is very clean and open plan.

It may get noisy at night, as any good pub should, but the establishment is large enough to find a quiet corner if that is what you desire.

Overall the Rose of Lancaster is an excellent addition to any list of good honest pubs and should definitely be visited.

Many thanks to Colin and remember that reviews of wherever you have been are always welcome.

If you want to get involved and review somewhere yourself then please let me know, alternatively suggest some places for me to try. Until next month,

steve.roberts@railtalkmagazine.co.uk

Station footbridge restoration to be entered for national railway heritage award

A station footbridge restoration project in Wiltshire is to be entered into this year’s National Railway Heritage Trust awards when it is completed. Network Rail has repainted the platform canopies at the Grade 2 listed station at Bradford-on-Avon and is restoring the station footbridge to its former glory.

The footbridge was lifted out recently and sent to a foundry in Plymouth for grit blasting and repair. When it is re-installed, the span and staircases will be painted in the original Great Western Railway colours of dark and light stone to reflect the station’s heritage status. Network Rail route asset manager for buildings, Simon Gyde, said: “I have been liaising with the Friends of Bradford-on-Avon and the Mayor for some time now and the work at this listed station is nearing completion.” “We have just finished the restoration of the canopies at Bradford-on-Avon station and painted them in the original GWR colour scheme. In addition, station manager First Great Western has completed some vegetation management.” “The final stage will be to restore the original roof to the footbridge, which was removed some 30 years ago. The Friends of Bradford-on-Avon and the Mayor are really keen to do this and with The Bradford on Avon Preservation Trust will raise the funds for the project in due course.” “First Great Western’s Bradford-on-Avon Station Manager Nicholas Reid said: “First Great Western prides itself on putting our customers first and supporting the communities we serve. “We recognise the key role that rail travel has for the local and national economy and we are delighted to be able to work with Network Rail to ensure the timely completion of this restoration project.

“In the last year, over £85 million has been invested across our network of 210 stations, by working with rail industry partners, the Department for Transport and local authorities - improving facilities and access for all of our passengers.” Mayor of Bradford on Avon, Cllr John Potter, added: “The whole project is a great example of a large national organisation taking the trouble to restore and enhance the fabric of a much-admired and well-used community facility.” David Moss, chairman of the Bradford on Avon Preservation Trust, said: “We strongly support restoration of this historic footbridge and look forward to helping raise the necessary funds.”

Gloucestershire and Warwickshire Railway

Heritage Diesel Weekend and open day
Friday 26th to Sunday 28th July, 2013

The GWR Diesel Department has confirmed its return to the diesel gala scene and that its first event for 2013 will be held over 3 days from Friday 26th July to Sunday 28th July 2013 .

After several years out of the mainstream of heritage railway galas due to a number of catastrophic embankment slips that pushed the railway to the brink of disaster, this diesel gala will be a celebration of the re-building of the line and a return of what has proved a popular gala in the enthusiast calendar and been missed by both visitors and volunteers alike.

To add to its appeal, the gala will be the first to feature running over the full 11 ¾ miles from Laverton to Cheltenham following the extension of the line towards Broadway in 2012 and use of the newly commissioned Gotherington signal-box and passing loop to allow a 35 minute frequency service from Cheltenham through most of the day.

As well as an intensive service of diesel hauled trains and a DMU service, the gala will include an Open Day at the newly built Toddington Diesel Shed with an under cover model railway exhibition, a number of 'behind the scenes' and 'how it works' displays relating to diesel locomotives, sales stands, and an opportunity to get an 'up close' view of two long term overhaul projects on Class 47 105 and Class 37 No. D6948 including cab visits. LMS diesel shunter No. 7069 will also be on display in the shed.

A number of family-friendly attractions are also planned at Toddington and Winchcombe (including a carriage and wagon workshop open day) which are also aimed at appealing to the family and general interest visitor. A real ale tent will be at Toddington throughout the weekend and 60s, 70s and 80s classic car rally will be held on the weekend, making for a weekend full of interest for all – young and old. Added to this, for those people wishing to come to the event by public transport, we will operate a FREE shuttle bus service from Cheltenham Spa (mainline station) to Cheltenham Racecourse (GWR station) at 09.00 and 09.40 on Saturday morning and at 10.15 on the Sunday morning to connect out into the first departures to Toddington. On the return, the bus will depart Racecourse at 17.26, 18.06 and 21.00 on the Saturday and 17.26 only on the Sunday, connecting out of the last trains from the GWR and into mainline services. This shuttle bus is a FREE service being offered and a novel way of travelling to this historic event on this Mk. 2 Leyland National 50-seater (please note that the GWR cannot be held responsible for missed connections at either end of the trip for any reason).

Saying all that, it's obviously the intensive locomotive hauled service that will be the main draw for enthusiasts with the long-awaited full debut of class 45 'Peak' Class 45 149, a class long associated with the Honeybourne line in the 1960s and 1970s. Class 26 043 should also star at the event should its restoration be completed in time (both locomotives are subject to availability following intensive testing so please keep an eye on the GWR website for details).

Therefore, the full motive power list is expected to be (subject to usual caveats on availability):
Class 20 137, Class 24 No. 5081, Class 26 043, Class 37 215, Class 45 149, Class 47 376 and Class 73 No. E6036.
At least one of the resident DMUs will also be in action over the weekend making this a fully-themed diesel weekend.

Tickets and prices: We are offering multi-day rover tickets for this gala. These, as well as single day rover tickets, are available in advance via our online booking system. Book early for a reduced rate! Further details on the Heritage Diesel Weekend are now available on our website: www.gwsr.com and a timetable with loco roster will be available shortly.

For information, the second diesel gala of the year will be the traditional Christmas Diesel Day to be held on the 27th December 2013 which should feature the debut of steam heat fitted Class 37 No. D6948 in original green livery.

Mid Hants Railway

Mid Hants diesel gala action in the form of GBRf Class 66 738 leading the Mirrlees powered 37 901 passing Four Marks with a service to Alresford, April 26th. [Daniel Stanbridge](#)

GWR Didcot

GWR No. 6023 'King Edward II' was built for the Great Western Railway in 1930 and in accordance with the intended use of the King class of loco spent most of its working life based in the West Country in order to tackle expresses over the Devon banks. In July 1930 it was allocated to Newton Abbott loco shed, where it was based until November 1936, when it was re-allocated to Plymouth Laira, from whence it returned in December the same year. It then continued to work out of Newton Abbott shed until February 1949, after which it was sent again to Laira until August 1956, when it moved to London's Old Oak Common depot - covering expresses to Wolverhampton. Its final months in BR service from September 1960 to withdrawal in June 1962 were spent at Cardiff's Canton shed.

It ended up at Barry Scrapyard and escaped from being entirely scrapped although parts were lost over a number of years. After being moved from the scrapyard it spend some years in the Fish Dock at Bristol Temple Meads but proper restoration did not take place due to various reasons and lack of funds. It was taken to Didcot Depot in 1990 and the Great Western Society commenced re-building. It was first steamed in public in 2011 and has had various public viewings and used on its demonstration track. On May 5th, No. 6023 looked splendid in blue livery as it posed on the former Southampton Western Docks turntable at the rear of Didcot depot.

Kent and East Sussex

Top Right: GWR 1600 Class 0-6-0PT No. 1638 runs round its train at Tenterden Town, May 19th. [Martin Hill](#)

Bottom Right: When the Great Western Railway looked to replace the ageing 0-6-2 tank locomotives they had inherited on merger in South Wales, they found that the design of these earlier classes was ideal for the lines they operated and they were very popular with loco crews. They had a high adhesive weight, good braking ability and lots of power. Running short distances meant that they did not need to have high capacity tanks or a large bunker. Being designed for mixed traffic the class was also suitable for running branch line passenger services where only a modest turn of speed was required. One of two rescued from Barry for preservation, No. 6619, is seen here at Tenterden Town on May 19th. [Martin Hill](#)

Below: No. 32670 is the second oldest of the surviving LBSCR Stroudley Terriers, having been built at Brighton works in December 1872 as one of the first group of the class, seen here in fine form as it passes Northiam. [Martin Hill](#)

GCR NORTH AND SOUTH SET TO REUNITE: NETWORK RAIL TO BUILD NEW BRIDGE OVER THE MIDLAND MAIN LINE BY 2015

The Great Central Railway's long held ambition to reunite two sections of the line is taking a dramatic leap forward. The GCR is entering a partnership with Network Rail to build a bridge over the Midland Main Line at Loughborough. Design work is underway and the new structure is expected to be in place by mid 2015. One of the most anticipated projects on any UK heritage railway, the reunification scheme will see a 500 metre, long demolished link between the Great Central Railway PLC (which operates trains between Loughborough and Leicester) and the GCR Nottingham Ltd, (which runs between Loughborough and South Nottingham) rebuilt. This will create an 18 mile railway linking communities and attractions with a 'heritage rail highway'. The initial phase being announced today will see the most high profile element of the project built; a new rail bridge to carry Great Central Railway trains over the four tracks of the Midland Main Line which handles high speed passenger services to London.

The case for rebuilding the whole link and recreating the 18 mile rail corridor was examined in a feasibility study carried out by Atkins in 2009. It was found to be technically achievable and capable of delivering a wide range of economic benefits to Charnwood and the East Midlands. "We are delighted to announce this incredible step forward," said Bill Ford, Managing Director of the Great Central Railway PLC. "Building this bridge unlocks the rest of the re-unification project which will

create an attraction with truly international appeal. We couldn't have better partners than Network Rail to deliver this element of the project. The completed railway will bring benefits to the local service sector and create new opportunities in rail testing, training and apprenticeships."

The breakthrough comes after many years of patient work by Great Central Railway Development, a company specially formed to push the reunification forward. Led by respected rail industry journalist Nigel Harris, GCRD was instrumental in recovering two redundant rail bridges, previously used by Network Rail at Reading. The bridges were moved to Loughborough in 2011. In their new life, they'll be placed 'end to end' to create a new single track line above the Midland Main Line.

The other elements of the overall project include repairing an existing canal bridge, building a new bridge over Railway Terrace Road in Loughborough and replacing a missing embankment. The estimated cost for the complete scheme is £8m. However it's anticipated the installation of the rail bridge will accelerate progress towards the 'golden spike' moment when the two sections of the GCR are reunited. Trains could be running over the full 18 mile railway within five years.

The GCR has launched an immediate appeal, called "Bridge to the Future" with the aim of raising the one million pounds required to pay for the work. While Network Rail are partners who will design and manage the construction, they won't be investing public money.

"There is huge interest and excitement amongst both railway enthusiasts and the general public in seeing this project succeed," said Mark Fowler of Great Central Railway Nottingham Ltd. "It is vitally important to us that the local communities join us in this vision too. It will drive economic benefit during construction and in the longer term too. So we look forward to support for the appeal locally, to make that positive difference a reality in our part of the East Midlands".

Phil Verster, Route Managing Director for Network Rail, added "Our electrification teams are already making significant changes to the infrastructure in this area so it's the ideal opportunity to get the bridge in place, with minimal disruption

and cost. Once the full scheme is complete it will bring significant economic benefits to the region as well as reinstating a piece of our railway heritage."

Reunification has made significant progress in recent years with the support of many local stakeholders, not least Loughborough's Member of Parliament, Nicky Morgan. "This is an incredibly exciting project for Loughborough, Leicestershire and beyond and I am delighted to give it my whole-hearted support. We have all seen the bridges lying next to the GCR station in Loughborough. To realise that, with the support of Network Rail and other key parties, their re-use to bring together the two parts of the Great Central Railway is now within sight, is a thrilling prospect. I am convinced that reunification will bring big benefits to our local economy and I do hope everyone locally will support this important first step."

Nigel Harris, Chairman of Great Central Railway Development concluded: "This agreement is the start of the Great Central's most exciting adventure yet; the delivery of a vision of an intercity heritage railway. It's been a very long haul to get to this point, especially over the last 20 years, but what has unlocked the problem has been Network Rail's willingness to work in partnership with GCR, Charnwood Borough Council, Loughborough MP Nicky Morgan and other stakeholders. The whole community is invited to participate. If you've ever wanted to see this happen, now is the time to act!"

To support the appeal, or for more information about building the bridge and the rest of the reunification project head to the GCR website (www.gcrailway.co.uk/unify) and click on the "Bridge to the Future" link. Donations can be made securely using a credit or debit card.
